Social Aspects of Language Acquisition Jessica Narloch, 2012-03-02 Research Paper undergraduate from the year 2006 in the subject American Studies Linguistics grade 1 3 University of Duisburg Essen language English abstract There are many ways of talking to children and preverbal infants and also a great variety of opinions about how important the child s environment is or if it plays a role at all The question is not only how and why children understand grammatical forms and language Ochs Schieffelin 1995 73 but also which role other aspects such as Parentese and Baby Talk play Are they necessary or totally unimportant Should parents talk to their children at all or is it senseless because they do not understand what the parents say to them Some people are of the opinion that Parentese only plays a minimal role Garnica 1977 63 whereas other people think that the verbal environment is important In how far is the acquisition of language the result of a process of interaction between mother and child Snow 1977 31 By explaining some aspects of talk to children such as Parentese Baby Talk expansion correction imitation and by giving examples of children being socialized through language the question about which role these aspects really play in first language acquisition should be answered

English Language Learning in the Asian Context 2nd Edn Paul Robertson, 2005 *Usage-Based Approaches to Language Acquisition and Language Teaching* Jacqueline Evers-Vermeul, Elena Tribushinina, 2017-03-06 Although usage based approaches have been successfully applied to the study of both first and second language acquisition to monolingual and bilingual development and

to naturalistic and instructed settings it is not common to consider these different kinds of acquisition in tandem. The present volume takes an integrative approach and shows that usage based theories provide a much needed unified framework for the study of first second and foreign language acquisition in monolingual and bilingual contexts. The contributions target the acquisition of a wide range of linguistic phenomena and critically assess the applicability and explanatory power of the usage based paradigm. The book also systematically examines a range of cognitive and linguistic factors involved in the process of language development and relates relevant findings to language teaching. Finally this volume contributes to the assessment and refinement of empirical methods currently employed in usage based acquisition research. This book is of interest to scholars of language acquisition language pedagogy developmental psychology as well as Cognitive Linguistics and Construction Grammar.

Cognitive Development and the Acquisition of Language Cognitive development and the acquisition of language, 1973. [A First Language](#) Roger Brown, 1973. For many years Roger Brown and his colleagues have studied the developing language of pre school children the language that ultimately will permit them to understand themselves and the world around them. This longitudinal research project records the conversational performances of three children studying both semantic and grammatical aspects of their language development. These core findings are related to recent work in psychology and linguistics and especially to studies of the acquisition of languages other than English including Finnish German Korean and Samoan. Roger Brown has written the most exhaustive and searching analysis yet undertaken of the early stages of grammatical constructions and the meanings they convey. The five stages of linguistic development Brown establishes are measured not by chronological age since children vary greatly in the speed at which their speech develops but by mean length of utterance. This volume treats the first two stages. Stage I is the

threshold of syntax when children begin to combine words to make sentences These sentences Brown shows are always limited to the same small set of semantic relations nomination recurrence disappearance attribution possession agency and a few others Stage II is concerned with the modulations of basic structural meanings modulations for number time aspect specificity through the gradual acquisition of grammatical morphemes such as inflections prepositions articles and case markers Fourteen morphemes are studied in depth and it is shown that the order of their acquisition is almost identical across children and is predicted by their relative semantic and grammatical complexity It is ultimately the intent of this work to focus on the nature and development of knowledge concerning grammar and the meanings coded by grammar knowledge inferred from performance from sentences and the settings in which they are spoken and from signs of comprehension or incomprehension of sentences

Language Acquisition in Deaf Children Britta Wirth,2006-04-14 Seminar paper from the year 2005 in the subject English Language and Literature Studies Linguistics grade 1 7 Ruhr University of Bochum English Department course Child Language Acquisition language English abstract Language acquisition has been studied for a long time but it is not completely understood yet Charles Darwin may have been the first to examine the development of a first language and he assumed that humans have an instinct to learn language Later on this idea was replaced by the notion that the acquisition of language is a sociocultural phenomenon In the early 1960s the linguist Chomsky presented a new explanation he said that children learn a language in the same way for example as they learn to walk upright because it is part of their nature and not because it is a form of their culture Thus language acquisition has a natural course of development 1If this theory is absolutely right or not is still being argued but shall not be the prior topic of this paper This work shall examine what happens if children are hearing impaired Are they able to follow the usual process of language acquisition or not In order to assess the consequences of language acquisition affected by physical disability one has to consider a general process of language development first There are various factors which have an influence on a child s process of language acquisition How large the impact of a specific factor is varies from theory to theory Nevertheless linguists agree that the grammatical structure the possible innate language acquisition mechanisms or biases as well as the biological or cognitive maturational factors and the nature of the language input to the child and the social context in which it takes place influence a child s language development No matter which factor has the most impressive impact on a child s speech progress by the age of four years he or she usually has a good command of the basic vocabulary syntax and phonology This language proficiency is found in all healthy children all over the world
