The Science of Self-Control Howard Rachlin, 2009-07-01 This book proposes a new science of self control based on principles of behavioral psychology and economics Claiming that insight and self knowledge are insufficient for controlling one s behavior Howard Rachlin argues that the only way to achieve such control and ultimately happiness is through the development of harmonious patterns of behavior

The Normative Status of Time Bias Kristie Miller, 2024-12-10 This book empirically investigates the nature of time biases Many philosophers think that it is rationally permissible to prefer a life that is overall worse to one that is overall better as long as the badness of that life lies in the past rather than the future These philosophers think that it is rationally permissible to be time biased Time biased individuals differently value the wellbeing of their various selves in virtue of where those selves are located in time This book focuses on three key kinds of time bias near present and future bias It presents a rich picture of the conditions under which we display these biases and it outlines several psychological explanations for them It then uses this new empirical research we conducted to inform arguments regarding the normative status of these biases At its heart it considers the question does having time biased preferences of one sort or another make us better off or worse off And it uses the answers to these questions to inform our theorising about whether we have reason either to have or to avoid having such preferences
