Treatise on Water Science, 2010-09-01

Water quality and management are of great significance globally as the demand for clean potable water far exceeds the availability. Water science research brings together the natural and applied sciences: engineering, chemistry, law, and policy, and economics. The Treatise on Water Science seeks to unite these areas through contributions from a global team of author experts. The 4 volume set examines topics in depth with an emphasis on innovative research and technologies for those working in applied areas. Published in partnership with and endorsed by the International Water Association (IWA), demonstrating the authority of the content. Editor in Chief Peter Wilderer, a Stockholm Water Prize recipient, has assembled a world class team of volume editors and contributing authors. Topics related to water resource management, water quality and supply, and handling of wastewater are treated in depth.

Viewing the Future in the Past H. Thomas Foster II, Lisa M. Paciulli, David J. Goldstein, 2016-05-05

Viewing the Future in the Past is a collection of essays that represents a wide range of authors, loci, and subjects that together demonstrate the value and necessity of looking at environmental problems as a long term process that involves humans as a causal factor. Editors H. Thomas Foster II, Lisa M. Paciulli, and David J. Goldstein argue that it is increasingly apparent to environmental and earth sciences experts that humans have had a profound effect on the physical, climatological, and biological earth. Consequently, they suggest that understanding any aspect of the earth within the last ten thousand years means understanding the density and activities of *Homo sapiens*. The essays reveal the ways in which archaeologists and anthropologists have devised methodological and theoretical tools and applied them to pre-Columbian societies in the New World and ancient sites in the Middle East. Some of the authors demonstrate how these tools can be useful in examining modern societies. The contributors provide evidence that past and present ecosystems, economies, and landscapes must be understood through the study of human activity over millennia and across the globe.
