

A photograph of a beach at sunset. The sky is a mix of orange, yellow, and blue. The ocean is dark blue with white foam from waves crashing onto the golden sand. The text is overlaid on the image in three dark rectangular boxes.

So Many Detours:

Detours A. Thompson, 2003-12 An anecdote filled memoir made up of the author's 50 years in classrooms at all educational levels

Paths András Gulyás, Zsolt Heszberger, József Biró, 2020-08-18 This open access book explores the amazing similarity between paths taken by people and many other things in life and its impact on the way we live, teach and learn. Offering insights into the new scientific field of paths as part of the science of networks, it entertainingly describes the universal nature of paths in large networked structures. It also shows the amazing similarity in the ways humans and other even nonliving things navigate in a complex environment to allow readers to easily grasp how paths emerge in many walks of life and how they are navigated. *Paths* is based on the author's recent research in the area of paths on networks, which points to the possible birth of the new science of paths as a natural consequence and extension of the science of networks. The approach is essentially story based, supported by scientific findings, interdisciplinary approaches, and at times even philosophical points of view. It also includes short illustrative anecdotes showing the amazing similarities between real world paths and discusses their applications in science and everyday life. *Paths* will appeal to network scientists and to anyone interested in popular science. By helping readers to step away from the networked view of many recent popular scientific books and start to think of longer paths instead of individual links, it sheds light on these problems from a genuinely new perspective. The path is the goal. The essence behind this short sentence is known to many people around the world, expressed through the interpretations of some of the greatest thinkers like Lao Tze and Gandhi. It means that it is the journey that counts, not the destination. When speaking about such subjective and intangible things, philosophy and religion are some of the only approaches that are addressed. In this book, the authors address this conventional wisdom from the perspective of natural science. They explore a sequence of steps that leads the reader closer to the nature of paths and accompany him on the search for the path to paths.
