Social Construction Of Science:

The Social Construction of Science Tom Jagtenberg, 1983 *The Social Construction of Technological Systems, anniversary edition* Wiebe E. Bijker, Thomas Parke Hughes, Trevor Pinch, 2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way *The Social Construction of Science* T. Jagtenberg, 1983-04-30 This book concerns the institutionalisation of the physical sciences The book breaks with the established tradition in the history philosophy and sociology of sciences by attempting to capture both the cognitive and social dimensions of institutionalisation in one unified analysis This unification has been achieved through a treatment of research as goal directed social action a theme which has been developed both theoretically and empirically The analysis presented is therefore unique in its breadth of focus and shows how the traditional concerns of sociology with generalised macro structures of meaning and action can be related to the lifeworlds of individual scientists The sociology of the sciences is still today a relative newcomer to the field of sciences studies which has traditionally been dominated by the history and philosophy of the sciences I hope that this book reflects the excitement I experienced in being able to respond to the debates and concepts which erupted in that particularly fertile period following the publication of Kuhn s *Structure of Scientific Revolutions* in 1962 a period from which a cognitively oriented sociology of the sciences was to emerge as a serious challenger to orthodoxies in the history philosophy and sociology of sciences **The Social Construction of What?** Ian Hacking, 1999 Lost in the raging debate over the validity of social construction is the question of what precisely is being constructed Facts gender quarks reality Is it a person An object An idea A theory Each entails a different notion of social construction Ian Hacking reminds us His book explores an array of examples to reveal the deep issues underlying contentious accounts of reality Especially troublesome in this dispute is the status of the natural sciences and this is where Hacking finds some of his most telling cases from the conflict between biological and social approaches to mental illness to vying accounts of current research in sedimentary geology He looks at the issue of child abuse very much a reality though the idea of child

abuse is a social product He also cautiously examines the ways in which advanced research on new weapons influences not the content but the form of science In conclusion Hacking comments on the culture wars in anthropology in particular a spat between leading ethnographers over Hawaii and Captain Cook Written with generosity and gentle wit by one of our most distinguished philosophers of science this wise book brings a much needed measure of clarity to current arguments about the nature of knowledge

The Cognitive Paradigm Marc de Mey,1982-07-31 The growing importance of the sciences in industrialised societies has been acknowledged by the increasing number of studies concerned with their development change and control In the past 20 or so years there has been a considerable growth in teaching and research programmes dealing with science and technology policy science and society sociology and history of science and similar areas which has resulted in much new material about the production and validation of scientific knowledge In addition to the quantitative growth of this literature there has also been a substantial shift in the problems addressed and approaches adopted In particular the substantive content of scientific knowledge has become the focus of many historical and sociological studies which seek to understand how knowledges develop and change in different social circumstances Instead of taking the privileged epistemological status of scientific knowledge for granted recent approaches have emphasised the socially contingent nature of knowledge production and validation and the pluralistic nature of the sciences Parallel to these developments there has been a shift in the treatment of science by the state business and public pressure groups Increasingly they have sought to control the direction of research and thus the content of knowledge directly rather than simply applying existing knowledge Science has become amenable to social control and influence Its sacred status has declined and it is increasingly viewed as a socially constituted phenomenon which can be studied in a similar manner to other cultural products

The Social Construction of What? Ian Hacking,1999-05-15 Lost in the raging debate over the validity of social construction is the question of what precisely is being constructed Facts gender quarks reality Ian Hacking's book explores an array of examples to reveal the deep issues underlying contentious accounts of reality especially regarding the status of the natural sciences

The Laws of Scientific Change Hakob Barseghyan,2015-08-17 This book systematically creates a general descriptive theory of scientific change that explains the mechanics of changes in both scientific theories and the methods of their assessment It was once believed that while scientific theories change through time their change itself is governed by a fixed method of science Nowadays we know that there is no such thing as an unchangeable method of science the criteria employed by scientists in theory evaluation also change through time But if that is so how and why do theories and methods change Are there any general laws that govern this process or is the choice of theories and methods completely arbitrary and random Contrary to the widespread opinion the book argues that scientific change is indeed a law governed process and that there can be a general descriptive theory of scientific change It does so by first presenting meta theoretical issues divided into chapters on the scope possibility and assessment of theory of scientific change It then builds a

theory about the general laws that govern the process of scientific change and goes into detail about the axioms and theorems of the theory

An Invitation to Social Construction Kenneth J Gergen,1999-12-06 An Invitation to Social Construction is an elegant overview of social constructionism from a major figure in the movement that is at once panoptic and accessible as an introductory text In this landmark work author Kenneth Gergen charts the background to the social constructionist movement and outlines the major debates topics and issues in a way that is at once profound yet highly readable It is an interdisciplinary tour de force that will influence the development of the field for years to come The book is essential reading for all students and academics interested in social constructionism and contemporary issues and debates across the social sciences

New Directions in the Philosophy of Science Maria Carla Galavotti,Dennis Dieks,Wenceslao J. Gonzalez,Stephan Hartmann,Thomas Uebel,Marcel Weber,2014-06-02 This volume sheds light on still unexplored issues and raises new questions in the main areas addressed by the philosophy of science Bringing together selected papers from three main events the book presents the most advanced scientific results in the field and suggests innovative lines for further investigation It explores how discussions on several notions of the philosophy of science can help different scientific disciplines in learning from each other Finally it focuses on the relationship between Cambridge and Vienna in twentieth century philosophy of science The areas examined in the book are formal methods the philosophy of the natural and life sciences the cultural and social sciences the physical sciences and the history of the philosophy of science

Handbook of Research on Industrial Advancement in Scientific Knowledge Diaz, Vicente González-Prida,Bonilla, Jesus Pedro Zamora,2019-01-18 In a society that praises and promotes technological advancement it becomes increasingly essential to review the effects of such rapid technological growth New high tech advances need to be examined to determine what they mean to science society and industry along with the benefits and challenges they present The Handbook of Research on Industrial Advancement in Scientific Knowledge addresses the intersection of technology and science where engineering considerations mathematical approaches and management tools provide a better understanding and awareness of Industry 4.0 while also taking into account the impact on current society This publication identifies methodologies and applications related to decision making risk and uncertainty and design and development not only on scientific and industrial topics but also on social and ethical matters It is designed for engineers entrepreneurs academicians researchers managers and students

Social Construction of Trust to Protect Ideas and Data in Space Science and Geophysics Lynne G. Zucker,Michael R. Darby,1995 This paper applies a rational action economic sociology approach to the central organizational theory question of whether action is embedded in pre formed institutions that are relatively cheap in terms of time and energy or to what extent action becomes embedded in newly constructed institutions that are more costly but perhaps better adapted to task goals We develop a new model of the social construction of trust producing social structure based on the initial endowment of this structure the demand for it and the cost of social construction We test the model with data on

construction of social structure in collaborations in space science and geophysics developed in a large number of interviews conducted by the Center for History of Physics of the American Institute of Physics We do find that greater pre existing endowment reduces social construction of new institutions while greater demand for trust increases that construction We also find some evidence that social construction of trust producing social structure in fact results in production of higher value science

Science without Myth Sergio Sismondo,1996-01-01 This philosophical introduction to and discussion of social and political studies of science argues that scientific knowledge is socially constructed
