Groundwater Pollution, Aquifer Recharge and Vulnerability N. S. Robins, 1998 The primary groundwater management issue in many countries today is pollution This may derive from a point source perhaps a leaking solvent store at a factory or it may be diffuse such as the threat posed by the use of agricultural fertilisers and pesticides The key to understanding the transport of a pollutant from the ground surface or near surface into an aquifer is an understanding of recharge In turn this allows the vulnerability of aquifers to pollution to be classified and appropriate land zones to be defined Land zonation of different classes of aquifer vulnerability is a valuable tool for management and planning In this volume the recent developments within the interlinked areas of groundwater pollution aquifer recharge and vulnerability are set against the current groundwater protection policies of the UK and Republic Ireland
