**Spectral Sensitization** H. Meier, 1968      Photographic Sensitivity Tadaaki Tani, 1995-11-30 Notwithstanding the current excitement surrounding cutting edge digital imaging techniques photographic film still provides the highest resolution and most beautiful images of any medium available For the first time in nearly 20 years Photographic Sensitivity Theory and Mechanisms offers a comprehensive systematic description of the subject stressing in particular the characteristics of silver halide photography Topics range from how to prepare silver halide grains and latent image formation to spectral and chemical sensitization to the future of silver halide photography Based on the author's more than 30 years experience in the field Photographic Sensitivity will appeal to a wide range of readers including students chemists and physicists working with silver halide imaging techniques and solid state imaging      **Near-Infrared Dyes for High**

**Technology Applications** S. Daehne, Ute Resch-Genger, Otto S. Wolfbeis, 1998-06-30 This book summarizes the results of the NATO Advanced Research Workshop on Syntheses Optical Properties and Applications of Near Infrared NIR Dyes in High Technology Fields held at Trest Czech Republic from September 24 to 27 1997 It was attended by 52 scientists from 16 countries among them 18 participants from 8 Eastern Europe The Workshop has been stimulated by the great progress that has been made in utilizing NIR dyes in high technology areas This has been triggered by the availability of reliable vel small and inexpensive laser diodes emitting in the NIR region which raise the analytical detection limits by several orders of magnitude allow time resolved measurements for temporal discrimination between spectrally similar species and make possible miniaturization as well as remote sensing through space and by fiber optical techniques Furthermore NIR dyes proved to be vel important in other high technology fields such as laser physics optical recording techniques nonlinear optics biochemisty and medicine      *Kirk-Othmer Concise Encyclopedia of Chemical Technology, 2 Volume Set*

Fujita, 2013-03-09 In conventional color photography spectral sensitizers cooperate with silver halide as acceptors of light during the exposure process color developers reduce silver halide grains during the developing process and finally the resulting oxidized developers react with couplers to form imaging dyes Instant color photography gives us an alternative way of realizing excellent color reproduction in which dyes changing their diffusibility play an important role The aim of this book is to provide researchers and graduate students with a perspective on how such organic compounds work in color photography and how seemingly miraculous techniques based on organic chemistry lead to color images of high quality The

readers will acquire the philosophy and learn from hints on how to develop functionalized organic compounds
