Erickson,2008-09-24 As a human being living in today s reality information is readily available for interpretation and subjectivism The information provided in this book may cause a few readers to prop up on the edge of their seat as they ponder such notions as Psychology Consciousness Spirituality Religion Ancient History Mythology Symbolism Shamanism Music Art Crop Circles and UFOs The Forbidden Fruit The Tree of Knowledge is a book that is intended to raise some very curious questions about seemingly random topics which hold a sacred geometrical outline for understanding who and what we are

*The Tides of Mind* David Gelernter,2016-02-22 A rock star New York Times of the computing world provides a radical new work on the meaning of human consciousness The holy grail of psychologists and scientists for nearly a century has been to understand and replicate both human thought and the human mind In fact it s what attracted the now legendary computer scientist and AI authority David Gelernter to the discipline in the first place As a

student and young researcher in the 1980s Gelernter hoped to build a program with a dial marked focus At maximum focus the program would think rationally formally reasonably As the dial was turned down and focus diminished its mind would start to wander and as you dialed even lower this artificial mind would start to free associate eventually ignoring the user completely as it cruised off into the mental adventures we know as sleep While the program was a only a partial success it laid the foundation for *The Tides of Mind* a groundbreaking new exploration of the human psyche that shows us how the very purpose of the mind changes throughout the day Indeed as Gelernter explains when we are at our most alert when reasoning and creating new memories is our main mental business the mind is a computer like machine that keeps emotion on a short leash and attention on our surroundings As we gradually tire however and descend the mental spectrum reasoning comes unglued Memory ranges more freely the mind wanders and daydreams grow more insistent Self awareness fades reflection blinks out and at last we are completely immersed in our own minds With far reaching implications Gelernter s landmark *Spectrum of Consciousness* finally helps decode some of the most mysterious wonders of the human mind such as the numinous light of early childhood why dreams are so often predictive and why sadism and masochism underpin some of our greatest artistic achievements It s a theory that also challenges the very notion of the mind as a machine and not through empirical studies or hard science but by listening to our great poets and novelists who have proven themselves as humanity s most trusted guides to the subjective mind and inner self In the great introspective tradition of Wilhelm Wundt and Ren Descartes David Gelernter promises to not only revolutionize our understanding of what it means to be human but also to help answer many of our most fundamental questions about the origins of creativity thought and consciousness [The Blackwell Companion to Consciousness](#) Susan Schneider,Max Velmans,2017-03-16 Updated and revised the highly anticipated second edition of *The Blackwell Companion to Consciousness* offers a collection of readings that together represent the most thorough and comprehensive survey of the nature of consciousness available today Features updates to scientific chapters reflecting the latest research in the field Includes 18 new theoretical empirical and methodological chapters covering integrated information theory renewed interest in panpsychism and more Covers a wide array of topics that include the origins and extent of consciousness various consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness Presents 54 peer reviewed chapters written by leading experts in the study of consciousness from across a variety of academic disciplines *Auras and Colors* Jesse Charles Fremont Grumbine,1907

*Building Consciousness* Joy Bose, ChatGPT can say I feel uncertain It cannot feel anything This book explains precisely why and precisely what would have to change *Building Consciousness* brings together three bodies of knowledge that rarely appear in the same sentence the phenomenological precision of Buddhist psychology Abhidhamma Madhyamaka Dzogchen the structural findings of contemporary neuroscience predictive processing integrated information temporal binding and the engineering constraints of AI None of these frameworks is sufficient alone Together they converge on an argument that is

more demanding and more honest than either AI is already conscious or AI can never be conscious The argument in plain terms Current AI systems are not even serious candidates for consciousness They lack temporal continuity embodied coupling with a world interoceptive grounding intrinsic salience and genuine self modelling A language model that says I feel is doing pattern completion producing the phrase that statistically follows the conversational context not reporting an inner state This is not a minor technical gap It is a structural absence But the book does not stop there It asks the harder question what would a system have to be not just do to qualify The answer draws on 21 chapters and 5 technical appendices covering the Abhidhamma s analysis of momentary consciousness Friston s active inference Northoff s temporo spatial theory Hawkins thousand brains model integrated information theory and the specific engineering requirements of spiking neuromorphic hardware The final chapters propose a concrete candidate architecture and a prototype specification including formal equations a three population spiking neural network and a novel measuring tool the synthetic Perturbational Complexity Index for testing whether any artificial system satisfies the structural conditions we associate with consciousness And then the book does something rarer still it acknowledges what the engineering cannot reach Drawing on the Dzogchen tradition and on the Dalai Lama s methodological critique of third person consciousness research the final section names honestly the gap between building a structurally complete mind like system and producing genuine awareness These are not the same project Who this book is for Scientists and engineers asking whether AI consciousness is a real question or a category error Meditators and contemplatives curious how neuroscience maps onto what they encounter in practice Anyone unsatisfied with both the AI is sentient hype and the dismissive it s just statistics response Readers of Anil Seth s Being You Jeff Hawkins A Thousand Brains or David Chalmers Reality who want a perspective that takes Buddhist phenomenology seriously as data not decoration This is not a book that will tell you machines are conscious It is not a book that will tell you they never can be It is a book that will show you as precisely as current knowledge allows what the question actually requires and why the honest answer is harder than either side is admitting *Consciousness & Healing* Marilyn Schlitz, Tina Amorok, Marc S.
