

Stereoselectivity in organic synthesis

- **Stereospecific reactions** - a reaction where the mechanism means the stereochemistry of the starting material determines the stereochemistry of the product; **there is no choice!** e.g. S_N2 reactions
- **Stereoselective reactions** - a reaction where one stereoisomer of a product is formed **preferentially** over another. The mechanism does not prevent the formation of two or more stereoisomers but **one predominates**.
- **Diastereoselective reactions** - a stereogenic centre is introduced into a molecule in such a way that diastereoisomers are produced in unequal amounts

- **Enantioselective reactions** - a reaction that produces two enantiomers of a product in unequal amounts

Stereochemistry of Carbon Compounds Ernest Ludwig Eliel,1962 *Stereochemistry* P. S. Kalsi,2009

Stereochemistry has always occupied a central position and is pivotal to the practice of organic chemistry A solid understanding of this subject is indeed critical to subsequent success in a science career Stereochemistry is therefore a core constituent both at the undergraduate and postgraduate chemistry courses This seventh edition is extensively revised and enlarged by adding new material to take account of recent developments and extensive amendments have been made to improve clarity The key features of this new addition are A brand new design Incorporation of basic principles in boxes directly links the students to the main text A large number of exercises with their solutions have been now added in each chapter These exercises are set at appropriate places so that the students can test their command of a particular topic New problems have been added at the end of each chapter Chemical illustrations have been modified and developed for clarity and information Generally the figures contain text as well to decrease the need to refer back and forth to the text and for better understanding *Stereochemistry of Radical Reactions* Dennis P. Curran,Ned A. Porter,Bernd Giese,1996-06-11 As little as a decade ago radicals were regarded as interesting reactive intermediates with little synthetic use However recent results show that radicals have an enormous potential for applications in stereoselective reactions it s all a matter of knowing what method to use and how to apply it Three world experts in the field have combined their expertise and present the concepts to understand and even to predict the course of stereoselective radical reactions In addition guidelines are established which will enable the readers to plan and carry out their own stereoselective syntheses with radicals A comprehensive list of references provides an easy access to the primary literature The Stereochemistry of Radical Reactions is a highly topical introduction to this burgeoning field of research Both advanced students and researchers active in the field will welcome this book as a source of concepts and ideas
