Textiles Medicine Healthcare:

Medical and Healthcare Textiles Subhash C. Anand, J F Kennedy, M Miraftab, S. Rajendran, 2010-07-15 Medical textiles remain one of the most dynamic areas of research in textiles. Medical and healthcare textiles is the fourth in a series of conferences held at the University of Bolton. Like its predecessors it has attracted papers from some of the leading international centres of expertise in the field. Contributors cover a range of topics including emerging textile based biomaterials, hygienic textiles, the use of textiles in infection control and as barrier materials, bandaging and pressure garments for managing chronic infections such as ulcers, the role of textiles in the management of burns and wounds, textile based implantable devices such as tissue scaffolds and sutures and intelligent textiles. Provides a comprehensive overview of medical textiles from the risk of infection control and barrier materials through to directives, regulations and standards shaping the medical device industry. Explores developments in healthcare and hygiene products including odor and pH control as well as protective and disposable fabrics. Reviews development in the area of implantable materials featuring vascular grafts, knee implants and scaffolds.

Medical Textiles Holly Morris, Richard Murray, 2021-12-21 This textbook aims to ensure that advances in medical textiles are addressed and that recent developments are able to be appreciated and understood not only by medical practitioners and healthcare personnel but also by textile scientists and technologists. The idea is to stimulate collaborative research and development in the field of medical textiles and to equip researchers with an understanding of the steps they need to take to ensure that their efforts be they to develop new devices for implantation or items for external application are carried out in such a way as to improve their effectiveness and enhance the prospects for their implementation. Attention is drawn to the need to improve outcomes in the practical setting and to guidance on the detailed planning required prior to engaging in experimental work. Standard tests can help researchers to monitor performance but for some important applications such as those required to demonstrate antimicrobial and fluid repellent performance in most items of protective wear standard tests consistently fall seriously short in terms of predicting how well they might work in the practical setting. Guidance is therefore given for their further development. Chapters within the textbook cover the history of innovation within medical textiles with particular attention given to key concepts of the latter part of the 19th Century and subsequent associated developments. Textile and polymer science underpinning fibres, fabrics, nano fibre technology and the functional finishes that can be applied to enhance the performance of medical textile products. Woven, knitted, nonwoven and braided fabrics and the key performance characteristics of each fabric type which make them particularly suited to specific medical textile roles such as mesh, grafts, filtration and scaffolds for tissue engineering. Implantable medical textiles, non implantable medical textiles, health and hygiene products and extracorporeal devices that use textile products. Legislative requirements for medical devices. The design of experiments and suitability for purpose of textile test methods. Case studies to illustrate how medical textiles are applied in practice. The book provides essential
