Languages and Compilers for Parallel Computing Bill Pugh, Chau-Wen Tseng, 2005-12-17 The 15th Workshop on Languages and Compilers for Parallel Computing was held in July 2002 at the University of Maryland College Park It was jointly sponsored by the Department of Computer Science at the University of Maryland and the University of Maryland Institute for Advanced Computer Studies UMIACS LCPC2002 brought together over 60 researchers from academia and research institutions from many countries The program of 26 papers was selected from 32 submissions Each paper was reviewed by at least three Program Committee members and sometimes by additional reviewers Prior to the workshop revised versions of accepted papers were informally published on the workshop's website and in a paper proceedings that was distributed at the meeting This year the workshop was organized into sessions of papers on related topics and each session consisted of two to three 30 minute presentations Based on feedback from the workshop the papers were revised and submitted for inclusion in the formal proceedings published in this volume Two papers were presented at the workshop but later withdrawn from the proceedings by their authors We were very lucky to have Bill Carlson from the Department of Defense give the LCPC 2002 keynote speech on UPC A C Language for Shared Memory Parallel Programming Bill gave an excellent overview of the features and programming model of the UPC parallel programming language *Special Edition Using Active Server Pages*

Scot Johnson, Keith Ballinger, Davis Howard Chapman, 1997 Presenting readers with an up to date look at how to create dynamic personalized web sites for both business and personal use this text focuses more on implementing Active Server Pages rather than on the theory behind working with Active Server Pages It includes new functionality available with the release of Microsoft's Internet Information Server 4.0 *BEA WebLogic Workshop* Joe Weber, Mark Wutka, 2003 BEA WebLogic Workshop is a rapid application development tool that makes building Java based Web service applications simple

With just a basic foundation of Java programming you can use WebLogic Workshop to develop Web services BEA WebLogic Workshop Kick Start provides everything you need to get started with WebLogic Workshop including a quick Java primer and appendixes covering the essentials of XML SOAP and WSDL Learn the features of WebLogic Workshop and review hundreds of code examples and explore the inner workings of this new tool The book s CD ROM contains all the source code and examples from the book plus a 90 day trial version of BEA WebLogic Platform which includes WebLogic Workshop Foreword

Web services have attracted much attention recently as the next big thing in computing technology Vendors of all shapes and sizes have announced their support for Web services technologies and every month a new Web services conference is popping up somewhere on the globe With all this hype and attention sometimes itAs difficult to really discover what Web services are where they fit in your company what the business case is and how you can actually get started taking advantage of this technology BEA has been working with customers to answer many of these questions and provide solutions that enable companies to easily construct Web services that meet their needs today Contrary to the common conception of Web services as a consumer focused technology Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards based technologies To make Web services really work in the enterprise however itAs essential that they meet core enterprise requirements Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules They must accommodate everything from modern J2EE based applications to legacy systems to applications at business partners They must be able to handle rich and complex information and transmit it between internal and external applications They must easily interact with other applications to leverage existing investments They must be robust reliable and they must perform Perhaps most important of all they have to be easy to build For Web services to flourish within an organization all developers will need to be able to build Web services that meet these requirements BEA WebLogic Workshop Kick Start introduces you to BEAAs new WebLogic Workshop product a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust enterprise features of the WebLogic J2EE application server WebLogic Workshop provides a graphical tool that makes it easy to visualize develop and test Web service applications and visual controls that dramatically simplify access to existing resources like databases packaged applications Enterprise Java Beans and other Web services The Workshop framework provides out of the box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the public contract that a Web service offers to other applications This makes Workshop Web services flexible in the face of a constantly changing IT environment Workshop also provides built in support for asynchronous messaging so that Web service applications can carry on rich two way conversations with their clients and accommodate interaction with legacy systems and human users Finally Workshop supports easy manipulation of coarse grained messages so that rich documents can be

handled without resorting to tedious XML DOM programming All of these capabilities can be accessed in a simple declarative fashion that enables all developers not just J2EE experts to get started building Web services today Even if you are new to the Java programming language or have never built a J2EE application before I think youAll be surprised how easy it is to get started with Workshop Working inside the WebLogic Workshop environment you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general and teach you the few Java and J2EE concepts youAll need to know along the way Rich with examples this book illustrates the power of Web services and will help you realize the value they can bring to your company Carl Sjogreen Product Manager WebLogic Workshop BEA Systems Inc [Using Microsoft FrontPage 2000](#) Dennis Jones,Neil Randall,1999 Special Edition Using Microsoft FrontPage 2000 is an all in one guide to designing creating and publishing on the World Wide Web and on intranets with the leading tool on the market The book fully documents the product and its features but it also gives you a solid foundation in the principles of planning and design More advanced coverage shows you how to integrate Web sites with databases and add Dynamic HTML XML and Java applets to your Web sites [Special Edition Using Adobe Creative Suite 2](#) Michael Smick,2005 Get acquainted with Adobe CS2 with the help of the ultimate comprehensive reference guide Special Edition Using Adobe Creative Suite 2 Not only does it include material that covers the new product release the author and team of contributors also covers how to use the individual products and how to integrate them so that you can use the Suite in an effective manner The entire Suite is covered including tools that aren t as well documented You TM ll find coverage of Photoshop Illustrator InDesign GoLive Acrobat Designer Version Cue Bridge Stock Photo With Special Edition Using Adobe Creative Suite 2 you will easily master Adobe Creative Suite 2 [10 Minute Guide to Lotus Notes 4.5 Web Navigator](#) Jane Calabria,1997 Unlike other Web browsers InterNotes Web Navigator is specifically designed to work with Lotus Notes allowing Notes users to translate content directly into Notes applications With this guide users will learn how to save frequently used pages with Notes cache features locate documents with ease with Notes powerful search engine forward Web pages and more [Mobile Agents and Security](#) Giovanni Vigna,2003-05-20 New paradigms can popularize old technologies A new standalone paradigm the electronic desktop popularized the personal computer A new connected paradigm the web browser popularized the Internet Another new paradigm the mobile agent may further popularize the Internet by giving people greater access to it with less eort MobileAgentParadigm The mobile agent paradigm integrates a network of computers in a novel way designed to simplify the development of network applications To an application developer the computers appear to form an electronic world of places occupied by agents Each agent or place in the electronic world has the authority of an individual or an organization in the physical world The authority can be established for example cryptographically A mobile agent can travel from one place to another subject to the des nation place s approval

The source and destination places can be in the same computer or in different computers. In either case the agent initiates the trip by executing a go instruction which takes as an argument the name or address of the destination place. The next instruction in the agent's program is executed in the destination place rather than in the source place. Thus in a sense the mobile agent paradigm reduces networking to a program instruction. A mobile agent can interact programmatically with the places it visits and if the other agents approve with the other agents it encounters in those places.

Using Enterprise JavaBeans 2.0 Chuck Cavaness, Brian Keeton, 2002. Special Edition. Later chapters describe advanced development topics including interoperability, horizontal services, and clustering. Throughout the book the authors construct a component-based auction web site using the J2EE architecture as a practical example.
