*STEM Education Now More Than Ever* Rodger W. Bybee, 2018 In response to these unconventional and uncertain years veteran educator Rodger W Bybee has written a book that is as thought provoking as it is constructive Now more than ever he writes America needs reminders of both the themes that made it great in the first place and STEM's contributions to its citizens Science educators must address STEM issues at local national and global levels And teachers should help students tackle today's problems with new approaches to STEM learning that complement traditional single discipline programs *STEM Education Now More Than Ever* addresses these themes through four wide ranging sections Parts of the book are what you might expect from a longtime thought leader in science education In light of the 2016 election and recent assaults on science's validity Bybee strongly asserts the need for a new case for STEM education Other parts may not seem typical for a book on STEM He writes about the Enlightenment the U S Constitution democracy and citizenship as reminders of the effects of STEM disciplines on America's foundational ideas and values In the end Bybee ties it all together with positive practical recommendations A major one involves newer faster ways to help teachers develop STEM units that address contemporary challenges in their classes Another involves the importance of strong leadership from teachers and the STEM education community leadership Bybee believes we need now more than ever

Amplifying Informal Science Learning Judy Diamond, Sherman Rosenfeld, 2023-06-30 This collection explores the broad landscape of current and future out-of-school science learning environments. Written by leading experts and innovators in informal science learning, these thoughtful and critical essays examine the changing nature of informal institutions such as science museums, zoos, nature centers, planetariums, aquaria, and botanical gardens and their impact on science education. The book examines the learning opportunities and challenges created by community-based experiences including citizen science, makerspaces, science media, escape rooms, hobby groups, and gaming. Based on current practices, case studies, and research, the book focuses on four cross-cutting themes: inclusivity, digital engagement, community partnerships, and bridging formal and informal learning to examine how people learn science informally. The book will be of interest to STEM, science, technology, engineering, and math educators both in and out of school; designers of science and experiential education programs; and those interested in building STEM learning ecosystems in their communities. *STEPS to STEM* Aaron D. Isabelle, 2017-02-02 STEPS Science Tasks Enhance Process Skills to STEM Science Technology Engineering Mathematics is an inquiry-based science curriculum supplement focused on developing upper elementary and middle students' process skills and problem-solving abilities characteristic of how scientists think and act. Students learn key concepts in seven big ideas in science: Electricity, Air, Water, Plants, Earth, Matter, and Light. Students maintain a written record of their completed activities, which can serve as a form of authentic assessment. STEPS to STEM aims to help students find enjoyment in science and in the process of problem-solving; there are things to do, discoveries to be made, and problems to solve. Ideally, these experiences will lead to more explorations and questions about the world around them. **STEM Project-Based Learning** Robert M. Capraro, Mary Margaret Capraro, James R. Morgan, 2013-04-20 This second edition of Project-Based Learning (PBL) presents an original approach to Science, Technology, Engineering, and Mathematics (STEM)-centric PBL. We define PBL as an ill-defined task with a well-defined outcome, which is consistent with our engineering design philosophy and the accountability

highlighted in a standards based environment This model emphasizes a backward design that is initiated by well defined outcomes tied to local state or national standard that provide teachers with a framework guiding students design solving or completion of ill defined tasks This book was designed for middle and secondary teachers who want to improve engagement and provide contextualized learning for their students However the nature and scope of the content covered in the 14 chapters are appropriate for preservice teachers as well as for advanced graduate method courses New to this edition is revised and expanded coverage of STEM PBL including implementing STEM PBL with English Language Learners and the use of technology in PBL The book also includes many new teacher friendly forms such as advanced organizers team contracts for STEM PBL and rubrics for assessing PBL in a larger format
