Modeling in Computer Graphics Bianca Falcidieno, Tosiyasu L. Kunii, 2012-12-06 In the history of technology many fields have passed from an initial stage of empirical recipes to a mature stage where work is based on formal theories and procedures This transition is made possible through a process called modeling Also Computer Graphics as a separate field of Computer Science makes extensive use of formal theories and procedures of modeling often derived from related disciplines such as mathematics and physics Modeling makes different application results consistent unifying varieties of techniques and formal approaches into a smaller number of models by generalizing and abstracting the knowledge in Computer Graphics This volume presents a selection of research papers submitted to the conference Modeling in Computer Graphics Methods and Applications held at the Research Area of the National Research Council in Genoa Italy on June 28 July 1 1993 This meeting was the ideal continuation of a previous conference organized in Tokyo Japan in April 1991 The success and the variety of research themes discussed at that meeting suggested to promote a new working conference on methods and applications of modeling to be held in Italy two years later

Parameter Analysis and Synthesis of Cellular Textures Thomas Conraths, 2022-05-04 Master's Thesis from the year 2018 in the subject Computer Science Applied grade 1.0 RWTH Aachen University Visual Computing Institute language English abstract The goal of this thesis is to provide a texture generation approach that works on cellular textures and enables structural modifications when generating a new output exemplar In the field of computer graphics two dimensional textures are an efficient tool to make a virtual scene richer in detail and therefore visually more appealing Consequently the perceived quality of a rendered image highly depends on the quality of the used textures Unfortunately creating textures by hand is a time consuming task which in extreme cases can only be performed by professional artists On the other hand the use of real photographs often requires post processing steps e.g. to make them tileable so that there are no visual transitions between multiple texture copies covering a large surface Approaches exist that automatically create new texture variants with different sizes based on a given input sample However most of these methods focus on generating output textures that are as similar to the original input as possible while not allowing for further modifications [Metallurgical Modeling for Aluminum Alloys](#) Murat Tirakioglu, Lawrence A.
