With contributions from some of the world's leading authorities, this publication considers the future of the book in the digital age. As more books are published than ever before, this timely publication addresses a range of critically important themes relating to the book, including the present and future for publishing, libraries, literacy and learning in the information society. In the early 1990s, the printed word appeared to be facing a terminal crisis, threatened from all sides by new media and other forms of entertainment. Subsequently, the book has proved to be resilient in the face of these challenges, confounding the predictions of those who saw its replacement, whilst digital technology is providing mechanisms that enhance our ability to produce and distribute printed books. New developments such as the growth of self-publishing and print-on-demand, and initiatives from major players such as Amazon and Google, mean that the printed book is in the middle of great changes. Chapters by leading experts in the field of publishing studies and information science. A broad range of perspectives on key issues such as print-on-demand and digital publishing. Contributions from around the world. *The Economics of the Digital Society* Luc Soete, Bas Ter Weel, 2005. Presents research into the economics of the digital society. This work offers an overview of the changes that information and communication technologies (ICTs) have brought about in our analysis and understanding of society, focusing upon welfare, economics, networks, the diffusion of businesses and various forms of entrepreneurship and more. This important new book presents a unique body of research into the economics of the digital society. It questions how modern economies have been transformed as a result of digital goods and markets and explores the policy implications and challenges of this revolution. Luc Soete and Bas ter Weel have assembled leading economists and social scientists to provide an invaluable insight into the influence of the digital society in the core fields of economics. They offer a comprehensive overview of the changes that information and communication technologies (ICTs) have brought about in our analysis and understanding of society, focusing particularly upon welfare, economics, networks, the diffusion of new businesses and new forms of entrepreneurship, the auctioning of licences, the much-debated role of intellectual property rights and the emergence of free software in the open source movement. *THE OFFICE*, 1991 *Infosystems*, 1986 *Real Time Digital Control*
