Nutrient Metabolism and Complications of Type 2 Diabetes Mellitus Hongji Zhang, Rong Huang, Qingqing Yin, Haoqiang Zhang, Shaohua Wang, 2026-03-17 The nutrient metabolism of patients with type 2 diabetes mellitus T2DM is closely linked to diabetes related complications Nutrient metabolism disorders particularly those involving glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism are not only associated with classic complications of diabetes such as diabetic cerebrovascular disease cardiovascular disease nephropathy retinopathy and peripheral neuropathy but also with potential diabetic outcomes like cognitive dysfunction abnormal bone metabolism metabolic fatty liver disease and sarcopenia Currently there is extensive research on the relationship between nutrient metabolism and classic complications and comorbidities of diabetes However studies focusing on non classical complications such as cognitive dysfunction bone metabolism abnormalities metabolic fatty liver disease and sarcopenia are still scarce Therefore there is an urgent need to delve into this under researched area specifically the relationship between nutrient metabolism and these non classical complications This relationship encompasses not only the occurrence of these complications but also their progression and key events such as dementia fractures hospitalization mortality or the progression to advanced stages of disease like the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma This Research Topic aims to explore the relationship between nutrient metabolism including glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism and diabetic complications including above mentioned classical complications and non classical complications in various populations e g different age and genders from the perspective of clinical nutrition Special attention will be given to the less

commonly recognized non classical complications in patients with T2DM We hope that these studies will shed light on the key nutrient metabolism factors influencing patient outcomes and potentially lead to the development of appropriate intervention strategies in patients with T2DM We welcome submissions including but not limited to the following aspects The relationship between nutrient metabolism and cognitive impairment in patients with T2DM particularly its connection to mild cognitive impairment and dementia as well as the role of nutrient metabolism in the progression from mild cognitive impairment to dementia among patients with T2DM The relationship between nutrient metabolism and abnormal bone metabolism in patients with T2DM The relationship between nutrient metabolism and metabolic fatty liver disease in patients with T2DM particularly its connection to the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma The relationship between nutrient metabolism and sarcopenia in patients with T2DM Other classic complications of T2DM related to nutrient metabolism not yet addressed in previous studies represent an intriguing area of research

Sanchez-Vives,Mel Slater,Omar Niamut,Xueni Pan,Lucio Lamberti,Anna Kobusinska,Piotr Skrzypczynski,Doron Friedman,Aurelio López-Tarruella Martínez ,Matthias Quent,2026-01-16 The metaverse is a large scale social environment based on the convergence of virtual and physical reality Participants can take part in the metaverse through virtual augmented or mixed reality They can carry out everyday activities together ranging from entertainment through to education business politics health or even legal proceedings This may have a profound impact on the way we live providing new beneficial ways of carrying out a multitude of activities but may also introduce a multitude of problems that we cannot envisage Mobile devices in conjunction with the world wide web and social media have led to revolutionary changes in society including on the positive side deep connectivity between people but on the other a potential threat to democracy The immersive nature of the metaverse will potentially enhance both the positive and negative impact by an order of magnitude The metaverse is an idea rather than a reality There exist systems that offer nascent examples of a metaverse such as VRChat Horizon Worlds Decentraland and others but these are virtual environments that can be visited simultaneously by a multitude of participants who can see avatars of one another and interact together in limited ways Such systems have been around since the 1990s usually called collaborative virtual environments CVEs The modern versions introduce conceptually nothing new except for their scale in implementation Even the avatars often used today are hardly more elaborate than those that were used in the 1990s and early 2000s although today we have the possibility of using personalized avatars of increasing quality Therefore the central problem to be addressed in this Research Topic is to foresee how a metaverse might actually go beyond the well known idea and implementations of CVEs How will experiences in the metaverse be different from experiences in CVEs What technology underpins the creation of such a metaverse What applications are likely to emerge across a range of activities that are likely to be positive for humanity What are the ethical
