Climate John R. Herman, Richard A. Goldberg, 1980
Scientific and Technical Aerospace Reports, 1979 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database
Weather, Climate and Human Affairs (Routledge Revivals) H. H. Lamb, 2013-09-05 First published in 1988 this is a reissue of a groundbreaking collection of essays written by Hubert Lamb one of the world's foremost experts on weather and climate and a uniquely authoritative voice in the history of climatology Hubert Lamb is able to provide a mature assessment of the effect of weather on people and vice versa His is a uniquely authoritative voice in the current debates about today's environment and the prospects for the future After a general introduction the book is divided into three parts The first part consists of a chronological series of portraits of climate and its impact on human affairs and the environment These extend from the warm climates of the geological past to the current drought in Africa There are several studies of the last few centuries and in particular of the various effects of the so called little Ice Age The second part is concerned with the causes and mechanisms of climate and weather changes including chapters discussing Christmas weather fronts and volcanoes In the final part Hubert Lamb looks to the future and attempts to put into perspective some of the pessimistic forecasts currently available The text which is consistently authoritative but always readable is augmented by numerous maps diagrams and photographs
Solar-terrestrial Predictions Proceedings: Working group reports and reviews Richard Frank Donnelly, 1979
The Role of the Sun in Climate Change Douglas V. Hoyt, Kenneth H. Schatten, 1997-04-03 The luminosity of the sun governs the temperatures of the planets Yet the solar forcing or driving of climate primarily due to changes in solar radiation has never been well documented Recent satellite measurements have shown that solar radiation varies as a function of time and wavelength a concept that has been hypothesized for the past two centuries and has recently become a major topic with all the attention paid to global warming This book reviews the physics of the concept of solar forcing from its beginnings in the early 1800s and apparent success in the 1870s to its near demise in the 1950s and recent resurgence Since its emphasis is on solar variations as a driver for climate change with only a brief discussion of other mechanisms the book will be of most interest to students in climate studies
Working group reports and reviews Richard Frank Donnelly, 1979
The Sun's Influence on Climate Joanna D. Haigh, Peter Cargill, 2015-06-23 The Earth's climate system depends entirely on the Sun for its energy Solar radiation warms the atmosphere and is fundamental to atmospheric composition while the distribution of solar heating across the planet produces global wind patterns and contributes to the formation of clouds storms and rainfall The Sun's Influence on Climate provides an unparalleled introduction to this vitally important relationship This accessible primer covers the basic properties of the Earth's climate system the structure and behavior of the Sun and the absorption of solar radiation

in the atmosphere It explains how solar activity varies and how these variations affect the Earth's environment from long term paleoclimate effects to century timescales in the context of human induced climate change and from signals of the 11 year sunspot cycle to the impacts of solar emissions on space weather in our planet's upper atmosphere Written by two of the leading authorities on the subject *The Sun's Influence on Climate* is an essential primer for students and nonspecialists alike

The Sun and Space Weather A. Hanslmeier, 2006-04-18 Since the Sun is the main source of space weather effects the first part of the book is devoted to a general introduction to the physics of the Sun A better understanding of the phenomena underlying solar activity is also important for prediction of solar outbursts and thus for establishing alert systems for space missions and telecommunication systems The book contains the following topics possible influence of the Sun on the Earth's climate the effects of radiation on humans in space and the expected radiation dose from various solar events disturbances of the Earth's ionosphere and the implications of radio communication at different wavelength ranges possible hazardous asteroids and meteoroids and their detection and space debris and special shielding of spacecraft In the cited literature more detailed information about the topics may be found This book provides an introduction and overview of modern solar terrestrial physics for students as well as for researchers in the field of astrophysics solar physics geophysics and climate research
