Two Mirrors:

Principles of Lasers Orazio Svelto, 2012-12-06 This third edition motivated by the numerous and significant developments in the laser field since the publication of the second edition in 1982 is a substantially revised version of the previous edition. The basic philosophy has however remained the same namely to provide a broad and unified description of laser behavior at the simplest level that is compatible with a correct physical understanding. The basic organization of the book has also remained the same. The book is therefore aimed at both classroom teaching and self study by students in electrical engineering physics and chemistry who have an interest in understanding the principles of laser operation. The major additions to this edition are the following:

- 1 New sections dealing with laser types in particular x ray lasers and new solid state lasers including alexandrite devices and a greatly extended description of semiconductor lasers
- 2 A more extended treatment of laser mode locking including new sections on cavity dumping and pulse compression
- 3 A more extended and greatly simplified description of the coherence and statistical properties of laser light as opposed to those of conventional light
- 4 A greatly extended discussion of the physics of gas discharges

Other important additions include a discussion of some topics from conventional optics e.g ray matrix methods Fabry Perot interferometers and multilayer dielectric mirrors Gaussian beam propagation e.g the ABeD law and the theory of relaxation oscillations and active mode locking.
