Viruses Cell Transformation And Cancer:

Viruses, Cell Transformation, and Cancer Roger J. A. Grand, 2001-04-20 Viruses are the agent responsible for perhaps up to one million cases of cancer worldwide each year Significantly the study of viruses has also provided important clues to the causes and development of the most common human cancers This volume presents an account of those viruses which have been directly associated with common human malignancies such as human papillomavirus HPV cervical carcinoma Epstein Barr virus EBV and Burkitt s lymphoma In addition the biology and biochemistry of those viruses which have been shown to be capable of transforming cells in culture are described in detail Thus adenovirus are discussed as are the other small DNA tumour viruses Simian virus 40 SV40 and polyoma virus Consideration has also been given to human T cell leukaemia virus HTLV hepatitis B virus HBV and human herpes virus 8 HHV8 amongst others General themes such as the host s immune response to viral infection virally induced apoptosis and the use of viruses as a delivery system in gene therapy have been discussed Individual chapters have been written by an international group of experts in their own field of research Research Grants Index National Institutes of Health (U.S.). Division of Research Grants, 1973 **Human**

Cancer Viruses J. Nicholas, K. -T. Jeang, T. -C. Wu, Samuel H. H. Chan, 2008-07 The first identification of a tumor causing virus Rous sarcoma virus occurred almost 100 years ago but it was not until the 1970s that the genetic basis for oncogenesis by this and other acutely transforming retroviruses was appreciated Since then numerous viral oncogenes and their corresponding cellular proto oncogene counterparts have been identified and these studies have contributed much to our understanding of crucially important aspects of cell biology and transformation This book provides an up to date overview of the 6 major viruses that cause human cancers HPV HBV HCV EBV KSHV and HTLV 1 with respect to their molecular biology and epidemiology and to clinical aspects of disease therapy and prevention Contributed by over a dozen internationally renowned scientists the chapters are comprehensively written and illustrated The book is suitable for advanced students postdoctoral researchers scientists and clinicians who wish to understand the mechanisms leading to cellular transformation and oncogenesis by these viruses as a basis for the development of specific therapeutic and antiviral treatments

Mechanisms of Cellular Transformation by Carcinogenic Agents Dezider Grunberger, S. P. Goff, 1987 Hardbound In the past five years the two major areas of cellular transformation and tumorigenesis chemical and physical tumorigenesis on the one hand and the investigation of tumor viruses on the other have undergone extraordinary unification This is mainly due to the discovery that the mechanisms of transformation are closely related In both cases agents act via a limited number of proto oncogenes This volume brings together reviews from both areas giving exceptional insight into the past and future work that has been explained and stimulated by this new framework **Research Awards Index** , 1979 *Mechanisms of DNA Tumor Virus Transformation* L. Rosenthal, W. Preiser, 2001-09-10 Approximately 15% of human cancer incidence can be attributed to virus infection i e viruses represent the second most important risk factor after tobacco consumption for cancer

development in humans Today five virus types are known to be involved in causing human cancer papillomaviruses retroviruses herpesviruses hepadnaviruses and flaviviruses This volume of Monographs in Virology provides a comprehensive review of a number of DNA tumor viruses Leading experts in the field of tumor virology discuss up to date information focusing on the transforming genes of DNA tumor viruses the mechanisms of transformation and the in vitro methodology used for their identification and characterization Even though DNA tumor viruses are a diverse group in vitro studies have revealed several common mechanisms of viral transformation The individual chapters of the book describe the latest research on the identification of viral oncogenes and their targets From a medical point of view understanding the molecular mechanisms of virus induced cellular transformation is an essential step for the development of effective strategies to prevent and control their associated malignancies Presented in a clear and concise manner this book will be of great value to students as well as researchers in the fields of general biology molecular biology cell biology and microbiology Malignant Transformation by Viruses Werner H. Kirsten, 2012-12-06 The position of Cancer Teaching Coordinator at The University of Chicago has been a consistently rewarding one because of the enthusiasm and support of the faculty and the students This volume is the result of the second of two recent intensive teaching sessions which have been planned and implemented by the group which forms the Cancer Coordinator's Advisory Committee The first of these teaching sessions was held in early March of 1964 and was entitled LEUKEMIA A Current and Forward Look It attracted overflow attendance from the students and staff of this medical institution augmented by members of the other medical centers in Chicago It was a stimulating and instructive colloquium and the only regret we heard expressed afterward was that we had not arranged for publication of the many excellent presentations One of the events commemorating the seventy fifth anniversary of the founding of The University of Chicago was this symposium on malignant transformations This time the Committee advised us to plan on speedy publication and logically it chose Dr Werner Kirsten a member of our faculty and an active and effective investigator in this general field of endeavor to serve as editor of the volume Again two of the same ingredients for effective instruction were blended an excellent group of scientists presenting their latest work and a fine attentive audience of students and staff
