Visual Servoing via Advanced Numerical Methods Graziano Chesi, Koichi Hashimoto, 2010-03-10 Robots able to imitate human beings have been at the core of stories of science fiction as well as dreams of inventors for a long time Among the various skills that Mother Nature has provided us with and that often go forgotten the ability of sight is certainly one of the most important Perhaps inspired by tales of Isaac Asimov comics and cartoons and surely helped by the progress of electronics in recent decades researchers have progressively made the dream of creating robots able to move and operate by exploiting artificial vision a concrete reality Technically speaking we would say that these robots position themselves and their end effectors by using the view provided by some artificial eyes as feedback information Indeed the artificial eyes are visual sensors such as cameras that have the function to acquire an image of the environment Such an image describes if and how the robot is moving toward the goal and hence constitutes feedback information This procedure is known in robotics with the term visual servoing and it is nothing else than an imitation of the intrinsic mechanism that allows human beings to realize daily tasks such as reaching the door of the house or grasping a cup of coffee

Computational Intelligence. Theory and Applications Bernd Reusch, 2003-06-30 Ten years of Fuzzy Days in Dortmund What started as a relatively small workshop in 1991 has now become one of the best known smaller conferences on Computational Intelligence in the world In fact it was to my best knowledge the first conference to use this term in 1994 although I confess that another larger conference was announced first and the trade mark Computational Intelligence was not coined in Dortmund I believe that the success of this conference is grounded on the quality of its reviewed and invited papers as well as its good organization From the beginning we have sent every paper anonymously to referees and we have always accepted only around 50% of the papers sent in This year it was a little less than that I would like to thank everybody who helped us by considering Dortmund's Fuzzy Days as the conference at which to appear I know that among the abstracts not accepted there were some quite good ones but we were restricted to a fixed number I also know that referees do a good job but cannot always judge wisely from abstracts Hence my apologies to those who did not make it this year Please try again I would like to point out that our conference also has a good regional reputation I am grateful to the City of Dortmund its Lord Mayor Dr Langemeyer the Dortmund project the DFG Deutsche Forschungsgemeinschaft the KVR Kommunalverband Ruhrgebiet the Martin Schmeier Stiftung and the C line AG Quantum GmbH for their valuable support

Vision Geometry VI Robert A. Melter, Angela Yuen Wu, Longin Latecki, 1997 Higher-Order Systems Federico

Battiston, Giovanni Petri, 2022-04-26 The book discusses the potential of higher order interactions to model real world relational systems Over the last decade networks have emerged as the paradigmatic framework to model complex systems Yet as simple collections of nodes and links they are intrinsically limited to pairwise interactions limiting our ability to describe understand and predict complex phenomena which arise from higher order interactions Here we introduce the new modeling framework of higher order systems where hypergraphs and simplicial complexes are used to describe complex patterns of interactions among any number of agents This book is intended both as a first introduction and an overview of the state of the art of this rapidly emerging field serving as a reference for network scientists interested in better modeling the interconnected world we live in

Digital Functions and Data Reconstruction Li Chen, 2012-12-12 Digital Functions and Data Reconstruction Digital Discrete Methods provides a solid foundation to the theory of digital functions and its applications to image data analysis digital object deformation and data reconstruction This new method has a unique feature in that it is mainly built on discrete mathematics with connections to classical methods in mathematics and computer sciences Digitally continuous functions and gradually varied functions were developed in the late 1980s A Rosenfeld 1986 proposed digitally continuous functions for digital image analysis especially to describe the continuous component in a digital image which usually indicates an object L Chen 1989 invented gradually varied functions to interpolate a digital surface when the boundary appears to be continuous In theory digitally continuous functions are very similar to gradually varied functions Gradually varied functions are more general in terms of being functions of real numbers digitally continuous functions are easily extended to the mapping from one digital space to another This will be the first book about digital functions which is an important modern research area for digital images and digitalized data processing and provides an introduction and comprehensive coverage of digital function methods Digital Functions and Data Reconstruction Digital Discrete Methods offers scientists and engineers who deal with digital data a highly accessible practical and mathematically sound introduction to the powerful theories of digital topology and functional analysis while avoiding the more abstruse aspects of these topics
