The Teaching of Arithmetic (Classic Reprint) David Eugene Smith, 2017-12-18 Excerpt from *The Teaching of Arithmetic* This work has been prepared with a view to the needs of Teachers Reading Circles and of those who are giving instruction or supervising the work in arithmetic in the elementary schools The effort has been made to free it from the more difficult technicalities of mathematics as far as possible and from that phraseology of the world of pedagogy that renders educational problems unnecessarily difficult It is the author's desire to place before the large body of teachers of arithmetic rather than the few who are interested in the technicalities of experiment a brief summary of the development of the science and of the reasons for teaching it a statement of the subject matter that may properly be selected for school purposes and the arrangement of this matter in a course of study a consideration of a few of the technical features of arithmetic and a discussion of the work of the several school years He feels it quite unnecessary however to repeat at length the simple explanations and devices that are found in any good textbook believing that the teacher will usually find it advantageous in such matters to follow the book that she is using About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

How to Teach Arithmetic Joseph C. Brown, 2015-06-26

Excerpt from *How to Teach Arithmetic A Manual for Teachers and a Textbook for Normal Schools* This book was written for the purpose of improving the teaching of arithmetic That arithmetic is poorly taught is indicated by the fact that a larger percentage of children fail in it than in any other subject The experience of the authors in training prospective teachers and in institute work confirms them in the opinion that the subject is suffering partly because many teachers lack instruction in its theories methods and devices The authors do not assume that method can be substituted for scholarship but they do contend that teachers as a class want and need definite advice in the teaching of arithmetic The demands of reading circles of special methods classes in normal school and in normal high schools and of supervisors but more especially the needs of the classroom teacher were kept in mind in the preparation of this book The number of pages given to the discussion of a topic is no index of the relative importance of the topic in the curriculum it rather indicates whether a subject is well or poorly taught However some chapters are elaborated at greater length than others for the reason that their material is intrinsically or historically more interesting This book was not written to exploit any particular textbook or theory or method It is a simple and accurate exposition of the best methods employed in teaching the subject today About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
