Understanding Human Development Ursula M. Staudinger,Ulman E.R. Lindenberger,2012-12-06 K Warner Schaie I am pleased to write a foreword for this interesting volume particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague mentor or research collaborator The editors begin their introduction by asking why one would want to read yet another book on human development They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development This volume provides a positive remedy to past deficiencies in volumes on hu man development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure This approach does not surprise After all the editors and most of the contributors at one time or an other had a connection to the Max Planck Institute of Human Development in Berlin whether as students junior scientists or senior visitors That institute under the leadership of Paul Baltes has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality Over the past two decades it has influenced the careers of a generation of scientists who have advocated long term studies of human development in an interdisciplinary context

GeroPsychology Rocío Fernández Ballesteros,2007 In this outstanding book leading experts from throughout Europe provide a fascinating overview of the most important psychological research into aging with special emphasis on training and professional issues as well as science In terms of its population Europe is

the oldest continent in the world thus placing European research into the effects and implications of an aging population in a unique position As this book shows the aging of the population should be considered a positive phenomenon that reflects sociopolitical educational biomedical and psychological development The real threat for our population is not aging but disability and the challenge for the 21st century is to reduce dependency and disability and thus improve well being and quality of life rather than increasing life expectancy The recent United Nations 2nd International Plan of Action on Aging and its Research Agenda on Aging for the 21st Century as well as policies of the European Federation of Psychologists Associations tell us that psychology and psychologists will play an essential part in meeting this challenge This book shows how
