Making Virtual Worlds Thomas Malaby, 2011-01-15 The past decade has seen phenomenal growth in the development and use of virtual worlds In one of the most notable Second Life millions of people have created online avatars in order to play games take classes socialize and conduct business transactions Second Life offers a gathering point and the tools for people to create a new world online Too often neglected in popular and scholarly accounts of such groundbreaking new environments is the simple truth that of necessity such virtual worlds emerge from physical workplaces marked by negotiation creation and constant change Thomas Malaby spent a year at Linden Lab the real world home of Second Life observing those who develop and profit from the sprawling self generating system they have created Some of the challenges created by Second Life for its developers were of a very traditional nature such as how to cope with a business that is growing more quickly than existing staff can handle Others are seemingly new How for instance does one regulate something that is supposed to run on its own Is it possible simply to create a space for people to use and then not govern its use Can one apply these same free range free market principles to the office environment in which the game is produced Lindens as the Linden Lab employees call themselves found that their efforts to prompt user behavior of one sort or another were fraught with complexities as a number of ongoing processes collided with their own interventions Malaby thoughtfully describes the world of Linden Lab and the challenges faced while he was conducting his in depth ethnographic research there He shows how the workers of a very young but quickly growing company were themselves caught up in ideas about technology games and organizations and struggled to manage not only their virtual world but also themselves in a nonhierarchical fashion In exploring the practices the Lindens employed he questions what was at stake in their virtual world what a game really is and how people participate and the role of the unexpected in a product like Second Life and an organization like Linden Lab
