*Structural Biology of the Complement System* Dimitrios Morikis, John D. Lambris, 2005-03-29 Of recent the structure of the complement system has received considerable attention including the publication of several three dimensional structures of complement proteins This has led to the need for an authoritative resource to provide a complete overview of the basics as well as an explanation of the cutting edge work being accomplished in this emerging science Structural Biology of the Complement System is devoted to the full exploration of structural aspects of the complement system with special consideration of the links between molecular structure and function Containing the work of leading authorities across the disciplines of immunology and structural biology the book serves both as an introductory volume for newcomers to the field and as a comprehensive reference for established researchers in particular those whose goal is the discovery of anticomplement drugs Written in a didactic style this volume is an appropriate resource for students in the fields of immunology and structural biology Structural Biology of the Complement System comes with downloadable resources containing color figures a molecular structure visualization program and files with three dimensional coordinates of the structures described in the book These tools allow readers to perform tailored structural manipulation and analysis while also serving as a starting point for further research

*Structural Immunology of Molecular Innate Immunity* Hyun Ho Park, Qian Yin, Jun Hyuck Lee, 2023-10-31 Innate immunity has a critical role in the early stage of the host defense response by the timely recognition of pathogenic or danger signals by various cell surface or cytoplasmic receptors This is followed by signal transduction via various adaptor and effector molecules The main functions of innate immunity are to identify and remove the invading pathogens to recruit various immune cells to the site of infection and to prepare the adaptive immune response The Innate immune system has been intensively studied for several decades and now we can begin to understand this system on a molecular level

*Molecular Biology of Assemblies and Machines* Alasdair Steven, Wolfgang Baumeister, Louise N. Johnson, Richard N. Perham, 2016-02-18 Molecular Biology of Assemblies and Machines provides a comprehensive narrative of the ways in which macromolecular structures assemble and how they interact with other complexes and organelles in the cell Richly illustrated in full color the text is written for advanced undergraduates graduate students and researchers in biochemistry molecular biology biophysics cell biology chemistry structural biology immunology microbiology and medicine

**Mechanistic Exploration of Complement System Interactions and Design of Complement-targeted Therapeutics** Ronald Dennis Gorham (Jr.),2013 Protein protein interactions play a crucial role in most biological functions Structural biology provides a glimpse into the atomic world helping to further understand the relation between protein structure and function Computational methods hold promise for understanding the dynamics of proteins and protein protein interactions but require careful selection of tools and parameters that are applicable for probing a phenomenon of interest We describe the utility of Poisson Boltzmann electrostatic calculations and their applicability in analysis of protein protein interactions and protein design We discuss a benchmark of these calculations against experimental mutagenesis data in order to choose parameters appropriate for calculating free energies of protein association Poisson Boltzmann electrostatic calculations in conjunction with other computational methods were used to better understand the molecular mechanism by which *Staphylococcus aureus* evades the complement system Recent crystallographic structures and experimental work provided insight into the molecular interactions between three secreted staphylococcal virulence factors Efb Ecb and Sbi and complement protein C3d Our work elucidated specific residues of Efb and Ecb crucial for C3d binding and suggested templates for the design of C3d and Efb Ecb derived peptides for therapeutic design We also used electrostatic calculations and molecular and Brownian dynamics simulations to investigate two distinct binding modes of Sbi domain IV to C3d and provide insight into the physiological contexts in which each binding site may play a role Finally we used these data as a basis for therapeutic design We used molecular dynamics simulations to assess rationally designed peptides aimed at competitively inhibiting interactions between complement C3d and its host and pathogenic ligands We also describe a comprehensive approach for virtual high throughput screening of small molecules that can bind to C3d Our data provide frameworks for the analysis of host pathogen interactions and drug design and identify several potential C3d binding molecules that serve as a foundation for the design of complement targeted and anti infective therapeutics **Index Medicus** ,2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
