Structure And Processes In The Mediterranean Ecosystem:

Mediterranean Ecosystems F.M. Faranda, L. Guglielmo, G. Spezie, 2012-12-06 This new book as described in the Preface presents a collection of contributions by several participants of the First National Congress of Marine Sciences organized by the CoNISMa. The 62 selected papers grouped into seven sections deal with a number of significant and current topics of marine research conducted at Mediterranean stations mostly situated along the Italian coast. The focus of each section is clearly expressed in the headings. The research sites may be conceived as key or focal points in the study of marine ecosystems. Indeed the information collected transcends regional interests by promoting better understanding of the structures and processes characterizing a wide area of the Mediterranean basin. The reader may easily note that in the entire book special attention is devoted to the observed changes and the ensuing diversity in time and space. Temporal diversity ranges from paleontological scales to shorter time scales. The latter is the case for instance with chemical species circulation patterns, energy fluxes linking particulate matter with microbial communities, structure of food webs, bacterial, plant and animal species etc. As to the disciplinary aspects, the majority of papers reflect a modern approach in both conceptual and methodological terms and a marked tendency to overcome the boundaries of specific disciplines. This applies particularly to the evaluation of intraspecific biodiversity where methods borrowed from molecular biology are largely utilized.

General Technical Report PSW, 1978 *Cold-Water Corals and Ecosystems* André Freiwald, J. Murray Roberts, 2006-01-17 Following the exciting exploration of hot vent and cold seep ecosystems, the rediscovery of cold water coral ecosystems with high technology instrumentation is currently another hot topic in multidisciplinary marine research. Conventionally coral reefs are regarded as restricted to warm and well illuminated tropical seas, not associated with cold and dark waters of higher latitudes. However, ongoing scientific missions have shed light on the global significance of this overlooked ecosystem. Cold water coral ecosystems are involved in the formation of large seabed structures such as reefs and giant carbonate mounds and they represent unexploited paleo environmental archives of earth history. Like their tropical cousins, cold water coral ecosystems harbour rich species diversity. Despite the great water depths, commercial interests overlap more and more with the coral occurrences. Human activities already impinge directly on cold water coral reefs, causing severe damage to this vulnerable ecosystem. In this volume, the current key institutions involved in cold water coral research have contributed 62 state of the art articles from geology and oceanography to biology and conservation.
