Nutrition Guide 2025 Edition

**Dr. Paul Insel, Don Ross, Kimberley
McMahon, Melissa Bernstein**

Nutrition Guide 2025 Edition:

Hands Off My Food! (Updated and Revised Edition) Sina McCullough, 2026-02-24 Are you truly in control of what you eat In *Hands Off My Food* Dr Sina McCullough exposes the hidden forces manipulating what ends up on your plate from unelected bureaucrats making top down decisions about your food to multinational biotech corporations pushing untested technologies into the food supply to regulatory frameworks that prioritize industry profits over public health With clarity urgency and meticulously sourced research this book reveals how the basic right to choose what we eat is being undermined often without our knowledge or consent Blending investigative reporting with a passionate defense of food sovereignty *Hands Off My Food* traces how federal policies and global agreements have chipped away at transparency safety and local autonomy in agriculture and nutrition It s a call to action for anyone who believes that individuals not corporations or centralized authorities should decide what s on the menu If you care about clean food honest labeling and the freedom to make informed choices about what nourishes your body this book is essential reading Because when it comes to your food the fight for control is already underway

Nutrient Metabolism and Complications of Type 2 Diabetes Mellitus Hongji Zhang, Rong Huang, Qingqing Yin, Haoqiang Zhang , Shaohua Wang, 2026-03-17 The nutrient metabolism of patients with type 2 diabetes mellitus T2DM is closely linked to diabetes related complications Nutrient metabolism disorders particularly those involving glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism are not only associated with classic complications of diabetes such as diabetic cerebrovascular disease cardiovascular disease nephropathy retinopathy and peripheral neuropathy but also with potential diabetic outcomes like cognitive dysfunction abnormal bone metabolism metabolic fatty liver disease and sarcopenia Currently there is extensive research on the relationship between nutrient metabolism and classic complications and comorbidities of diabetes However studies focusing on non classical complications such as cognitive dysfunction bone metabolism abnormalities metabolic fatty liver disease and sarcopenia are still scarce Therefore there is an urgent need to delve into this under researched area specifically the relationship between nutrient metabolism and these non classical complications This relationship encompasses not only the occurrence of these

complications but also their progression and key events such as dementia fractures hospitalization mortality or the progression to advanced stages of disease like the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma This Research Topic aims to explore the relationship between nutrient metabolism including glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism and diabetic complications including above mentioned classical complications and non classical complications in various populations e g different age and genders from the perspective of clinical nutrition Special attention will be given to the less commonly recognized non classical complications in patients with T2DM We hope that these studies will shed light on the key nutrient metabolism factors influencing patient outcomes and potentially lead to the development of appropriate intervention strategies in patients with T2DM We welcome submissions including but not limited to the following aspects The relationship between nutrient metabolism and cognitive impairment in patients with T2DM particularly its connection to mild cognitive impairment and dementia as well as the role of nutrient metabolism in the progression from mild cognitive impairment to dementia among patients with T2DM The relationship between nutrient metabolism and abnormal bone metabolism in patients with T2DM The relationship between nutrient metabolism and metabolic fatty liver disease in patients with T2DM particularly its connection to the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma The relationship between nutrient metabolism and sarcopenia in patients with T2DM Other classic complications of T2DM related to nutrient metabolism not yet addressed in previous studies represent an intriguing area of research
