Diabetes Mellitus* Hongji Zhang,Rong Huang,Qingqing Yin,Haoqiang Zhang ,Shaohua Wang,2026-03-17 The nutrient
metabolism of patients with type 2 diabetes mellitus T2DM is closely linked to diabetes related complications Nutrient
metabolism disorders particularly those involving glucose cholesterol fatty acids uric acid amino acids and vitamins
metabolism are not only associated with classic complications of diabetes such as diabetic cerebrovascular disease
cardiovascular disease nephropathy retinopathy and peripheral neuropathy but also with potential diabetic outcomes like
cognitive dysfunction abnormal bone metabolism metabolic fatty liver disease and sarcopenia Currently there is extensive
research on the relationship between nutrient metabolism and classic complications and comorbidities of diabetes However
studies focusing on non classical complications such as cognitive dysfunction bone metabolism abnormalities metabolic fatty
liver disease and sarcopenia are still scarce Therefore there is an urgent need to delve into this under researched area
specifically the relationship between nutrient metabolism and these non classical complications This relationship
encompasses not only the occurrence of these complications but also their progression and key events such as dementia
fractures hospitalization mortality or the progression to advanced stages of disease like the transition from metabolic fatty
liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma This Research Topic aims to explore
the relationship between nutrient metabolism including glucose cholesterol fatty acids uric acid amino acids and vitamins
metabolism and diabetic complications including above mentioned classical complications and non classical complications in
various populations e g different age and genders from the perspective of clinical nutrition Special attention will be given to
the less commonly recognized non classical complications in patients with T2DM We hope that these studies will shed light
on the key nutrient metabolism factors influencing patient outcomes and potentially lead to the development of appropriate
intervention strategies in patients with T2DM We welcome submissions including but not limited to the following aspects The
relationship between nutrient metabolism and cognitive impairment in patients with T2DM particularly its connection to mild
cognitive impairment and dementia as well as the role of nutrient metabolism in the progression from mild cognitive
impairment to dementia among patients with T2DM The relationship between nutrient metabolism and abnormal bone
metabolism in patients with T2DM The relationship between nutrient metabolism and metabolic fatty liver disease in patients
with T2DM particularly its connection to the transition from metabolic fatty liver to metabolic steatohepatitis and even the
development of hepatocellular carcinoma The relationship between nutrient metabolism and sarcopenia in patients with
T2DM Other classic complications of T2DM related to nutrient metabolism not yet addressed in previous studies represent an
intriguing area of research **Phototherapeutic Approaches to Neurodegeneration** Hagera Dilnashin,Surya Pratap

Singh,2026-01-01 This book provides a comprehensive exploration of the role of plant based medicines or phytomedicine in the prevention and treatment of neurodegenerative disorders It delves into how various phytochemicals can modulate key biological pathways involved in diseases like Alzheimer s Parkinson s and other neurodegenerative conditions The chapters highlight the importance of phytopharmacological agents such as polyphenols curcumin and resveratrol in targeting oxidative stress protein aggregation and inflammation Later a few chapters discuss how polyphenols help protect mitochondria and some explore curcumin s role in regulating the mTOR and autophagy pathways This book is an excellent resource for researchers in neuroscience pharmacology and natural medicine as well as practitioners seeking holistic approaches to neurological health Reactive Oxygen Species in Metabolic Inflammation Sumel Ashique,Neeraj

Mishra,2026-02-06 Reactive oxygen species ROS mediated inflammation plays a critical role in the onset and progression of various metabolic disorders including obesity diabetes and non alcoholic fatty liver disease NAFLD Dysregulated ROS production leads to oxidative stress which triggers chronic low grade inflammation disrupting cellular homeostasis and metabolic functions This pathological interplay exacerbates insulin resistance lipid accumulation and mitochondrial dysfunction creating a vicious cycle of metabolic dysregulation Understanding the molecular mechanisms behind ROS mediated inflammation is crucial for developing targeted therapeutic interventions to break this cycle and mitigate disease progression This comprehensive book bridges the gap between fundamental molecular insights and translational therapeutic strategies It begins by delving into the signaling pathways involved such as NF B and Nrf2 and highlighting the role of key players like mitochondria and antioxidant systems Later chapters explore emerging therapeutic approaches including postbiotics natural antioxidants and pharmacological agents offering practical solutions for managing metabolic disorders By addressing this critical intersection of inflammation oxidative stress and metabolism this book is a valuable guide for researchers clinicians and healthcare professionals who aim to tackle the global burden of metabolic diseases effectively

metabolism in neurological diseases and mental disorders Chao Luo,Xiao-Yuan Mao,Jie Yu ,Xiaobo Mao,2026-02-24 Lipid metabolism plays a crucial role in the development and function of the nervous system with its dysregulation implicated in various neurological diseases and mental disorders The brain s rich lipid content for example neurosteroids derived from cholesterol are intricately linked to lipid metabolism as they not only regulate the synthesis and breakdown of lipids in the brain but also modulate the overall lipid profile impacting brain function and health Emerging research demonstrates that imbalances in lipid profiles such as altered cholesterol and fatty acid metabolism contribute to the pathogenesis of conditions like epilepsy Alzheimer s disease Parkinson s disease and depression These lipid imbalances affect cellular processes including membrane fluidity neurotransmitter function and inflammation which are critical for cognitive health and mood regulation This research background highlights the necessity for a deeper understanding of lipid metabolism s impact on

neurological and psychiatric conditions offering the potential for novel therapeutic targets and early diagnostic markers The primary objective of this research is to elucidate the intricate interplay between lipid metabolism and its implications for the progression of neurological diseases and mental disorders We aim to investigate how the dysregulation of lipid homeostasis contributes to the pathogenesis of conditions By employing cutting edge molecular biology techniques we will identify key lipid species and metabolic pathways disrupted in these disorders Our research will also explore the potential of modulating lipid metabolism as a therapeutic strategy to ameliorate disease symptoms and halt disease progression Ultimately we seek to enhance the understanding of lipid mediated mechanisms in neurodegenerative and psychiatric conditions paving the way for novel targeted interventions We welcome manuscript submissions of all types including original studies method papers reviews perspectives and case reports Submissions may encompass clinical trials and basic in vivo or in vitro studies Themes for submission include but are not limited to the following Lipid metabolism in neurological diseases e g epilepsy Parkinson s disease Alzheimer s disease Lipid metabolism in mental disorders e g schizophrenia major depressive disorder generalized anxiety disorder Neurosteroids in brain diseases Gut brain axis in neurological diseases and mental disorders Treatment or intervention in neurological diseases and mental disorders through lipid metabolic regulation Treatment or intervention on neurological disease and mental disorders through lipid metabolic regulation

The Intermittent Fasting Revolution Mark P. Mattson,2022-02-01 How intermittent fasting can enhance resilience improve mental and physical performance and protect against aging and disease Most of us eat three meals a day with a smattering of snacks because we think that s the normal healthy way to eat This book shows why that s not the case The human body and brain evolved to function well in environments where food could be obtained only intermittently When we look at the eating patterns of our distant ancestors we can see that an intermittent fasting eating pattern is normal and eating three meals a day is not In The Intermittent Fasting Revolution prominent neuroscientist Mark Mattson shows that intermittent fasting is not only normal but also good for us it can enhance our ability to cope with stress by making cells more resilient It also improves mental and physical performance and protects against aging and disease Intermittent fasting is not the latest fad diet it doesn t dictate food choice or quantity It doesn t make money for the pharmaceutical processed food or health care industries Intermittent fasting is an eating pattern that includes frequent periods of time with little or negligible amounts of food It is often accompanied by weight loss but Mattson says studies show that its remarkable beneficial effects cannot be accounted for by weight loss alone Mattson whose pioneering research uncovered the ways that the brain responds to fasting and exercise explains how thriving while fasting became an
