The Joining Tree:

Network-Aware Security for Group Communications Yan Sun, Wade Trappe, K. J. Ray Liu, 2007-10-17 Group oriented communications will play a significant role in the next generation of networks as many services such as pay per view media broadcasts and the delivery of network control messages will rely upon the ability to reliably deliver data simultaneously to a large group of users. As these networks become increasingly pervasive and these multi user services become increasingly ubiquitous it will become essential that a complementary suite of security solutions are deployed in order to protect these services from a broad spectrum of security threats that are unique to group communications. This book aims to fill a growing need in the research community for a reference that describes the state of the art in securing group communications. Network Aware Security for Group Communications focuses on tailoring the security solution to the underlying network architecture such as the wireless cellular network or the ad hoc sensor network or to the application using the security methods such as multimedia multicasts.

Advanced Computing, Networking and Informatics- Volume 2 Malay Kumar Kundu, Durga Prasad Mohapatra, Amit Konar, Aruna Chakraborty, 2014-05-26 Advanced Computing Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing overlap among them. However their convergence is observed in many real world applications including cyber security internet banking healthcare sensor networks cognitive radio pervasive computing amidst many others. This two volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security signal and image processing ontology and human computer interfaces HCI. The two volumes together include 148 scholarly papers which have been accepted for presentation from over 640 submissions in the second International Conference on Advanced Computing Networking and Informatics 2014 held in Kolkata India during June 24-26 2014. The first volume includes innovative computing techniques and relevant research results in informatics with selective applications in pattern recognition signal image processing and HCI. The second volume on the other hand demonstrates the possible scope of the computing techniques and informatics in wireless communications networking and security.

Efficient Memoization Algorithms for Query Optimization: Top-Down Join Enumeration Through Memoization on the Basis of Hypergraphs Pit Fender, 2014-12 For a DBMS that provides support for a declarative query language like SQL the query optimizer is a crucial piece of software. The declarative nature of a query allows it to be translated into many equivalent evaluation plans. The process of choosing a suitable plan from all alternatives is known as query optimization. The basis of this choice are a cost model and statistics over the data. Essential for the costs of a plan is the execution order of join operations in its operator tree since the runtime of plans with different join orders can vary by several orders of magnitude. An exhaustive search for an optimal solution over all possible operator trees is computationally infeasible. To decrease complexity the search space must be restricted. Therefore a well accepted heuristic is applied. All possible bushy join trees are considered while cross products are excluded from the

search There are two efficient approaches to identify the best plan bottom up and top down join enumeration But only the top down approach allows for branch and bound pruning which can improve compile time by several orders of magnitude while still preserving optimality Hence this book focuses on the top down join enumeration In the first part we present two efficient graph partitioning algorithms suitable for top down join enumeration However as we will see there are two severe limitations The proposed algorithms can handle only 1 simple binary join predicates and 2 inner joins Therefore the second part adopts one of the proposed partitioning strategies to overcome those limitations Furthermore we propose a more generic partitioning framework that enables every graph partitioning algorithm to handle join predicates involving more than two relations and outer joins as well as other non inner joins As we will see our framework is more efficient than the adopted graph partitioning algorithm The third part of this book discusses the two branch and bound pruning strategies that can be found in the literature We present seven advancements to the combined strategy that improve pruning 1 in terms of effectiveness 2 in terms of robustness and 3 most importantly avoid the worst case behavior otherwise observed Different experiments evaluate the performance improvements of our proposed methods We use the TPC H TPC DS and SQLite test suite benchmarks to evaluate our joined contributions As we show the average compile time improvement in those settings is 100% when compared with the state of the art in bottom up join enumeration Our synthetic workloads show even higher improvement factors

A Guided Tour of Relational Databases and Beyond Mark Levene, George Loizou, 2012-09-18

Database theory is now in a mature state and this book addresses important extensions of the relational database model such as deductive temporal and object oriented databases It provides an overview of database modelling with the Entity Relationship ER model and the relational model providing the pivot on which the material revolves The main body of the book focuses on the primary achievements of relational database theory including query languages integrity constraints database design computable queries and concurrency control The most important extensions of the relational model are covered in separate chapters This book will be useful to third year computer science undergraduates and postgraduates studying database theory and will also be of interest to researchers and database practitioners who would like to know more about the ideas underlying relational database management systems and the problems that confront database researchers

The Joining Tree Clarence Cameron, 2002-10 [Generic Inference](#) Marc Pouly, Juerg Kohlas, 2012-01-10 This book provides a rigorous algebraic study of the most popular inference formalisms with a special focus on their wide application area showing that all these tasks can be performed by a single generic inference algorithm Written by the leading international authority on the topic it includes an algebraic perspective study of the valuation algebra framework an algorithmic perspective study of the generic inference schemes and a practical perspective formalisms and applications Researchers in a number of fields including artificial intelligence operational research databases and other areas of computer science graduate students and professional programmers of inference methods will benefit from this work
