Waking Of The Eye:

The Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology Motivation Evelyn

Satinoff, Philip Teitelbaum, 2013-11-11 Motivation addresses a central problem in psychology Why does an animal s behavior fluctuate in the face of an unaltered environment In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does The book suffers from several omissions There is no chapter on the development of motivated behavior There is none on reward systems in the brain owing to the untimely death of James Olds whose contribution would have enriched this book appreciably and to whom we dedicate it EVELYN SATINOFF PHILIP TEITELBAUM VII Contents PART I UNDERLYING ACTIVATIONAL SYSTEMS CHAPTER 1 Motivation Biological Clocks and Temporal Organization of Behavior 3 Irving Zucker Reactivity to External Stimuli 6 Reactivity to Interoceptive Stimuli 7 Sources of Biological Rhythmicity 9 Rhythm Generation 9 Rhythm Synchronization 10 Consequences of Rhythm Desynchronization 11 *Ophthalmic therapeutics* Timothy Field Allen, 1892 *Sleep Research*, 1995 *Collier's*, 1926 **The Tragedie of Cymbeline** William Shakespeare, 1913
