Technology and the Future of Work Paul S. Adler, 1992 This book brings together a set of essays exploring the implications of new technologies in the workplace The common premise of the contributions is that the effective implementation of automation in manufacturing and engineering operations will typically require a workforce

with a higher skill profile Examining the experience of countries in Europe Australia Asia and the U S the book analyzes four themes the new competencies required for effective implementation of new technologies how firms can develop these new competencies the implications of these changes for industrial relations and how firms can weave together business strategy technology strategy and personnel strategy to build competitive advantage with greater rather than lesser skills This argument contradicts the conventional assumption that automation will not only reduce the number of workers required to produce a given product but also require less skilled workers to do so *Shaping the Future of Work* Thomas Kochan, Lee Dyer, 2020-11-24 This book provides a clear roadmap for the roles workers and leaders in business labor education and government must play in building a new social contract for all to prosper It is a call to action for a collaborative effort to develop both high quality jobs and strong successful businesses while simultaneously overcoming the deep social and economic divisions that are all too apparent in society today Written by two leading and trusted experts in the field of employment and work from MIT and Cornell University this book is a practical action oriented guide Readers will feel empowered to take actions needed to shape a better future of work for themselves their employees their co workers and others they may represent It emphasizes the need to fix America s broken social contract and reimagine a new one The most important message of this book is that we have the ability to shape the work of the future by harnessing the power of new technologies The book is essential reading for business executives labor leaders and workforce advocates government policy makers politicians and anyone who is interested in using emerging knowledge and technologies to drive innovation creating high quality jobs and shaping a more broadly shared prosperity *The Future of Work* Charles B. Handy, 1984 Examines the place of work in society and discusses the possible future development of employment in Great Britain

**Gender, Technology, and the Future of Work** Mariya Brussevich, Ms. Era Dabla-Norris, Christine Kamunge, Pooja Karnane, Salma Khalid, Ms. Kalpana Kochhar, 2018-10-09 New technologies digitalization artificial intelligence and machine learning are changing the way work gets done at an unprecedented rate Helping people adapt to a fast changing world of work and ameliorating its deleterious impacts will be the defining challenge of our time What are the gender implications of this changing nature of work How vulnerable are women s jobs to risk of displacement by technology What policies are needed to ensure that technological change supports a closing and not a widening of gender gaps This SDN finds that women on average perform more routine tasks than men across all sectors and occupations tasks that are most prone to automation Given the current state of technology we estimate that 26 million female jobs in 30 countries 28 OECD member countries Cyprus and Singapore are at a high risk of being displaced by technology i e facing higher than 70 percent likelihood of being automated within the next two decades Female workers face a higher risk of automation compared to male workers 11 percent of the female workforce relative to 9 percent of the male workforce albeit with significant heterogeneity across sectors and countries Less well educated and older female workers aged 40 and above as well as those in low skill clerical

service and sales positions are disproportionately exposed to automation Extrapolating our results we find that around 180 million female jobs are at high risk of being displaced globally Policies are needed to endow women with required skills close gender gaps in leadership positions bridge digital gender divide as ongoing digital transformation could confer greater flexibility in work benefiting women ease transitions for older and low skilled female workers
