consistently across 11 country cases from around the world illustrating alternative transition pathways in various contexts The cases are presented as narratives drawing on stakeholder driven research efforts They showcase diverse empirical evidence reflecting the complex challenges to and potential negative consequences of such pathways Together they enable the reader to draw valuable lessons on the risks and uncertainties associated with choosing the envisaged transition pathways as well as ways to manage the implementation of these pathways and ultimately enable sustainable and lasting social and environmental effects This book will be of great interest to students scholars and practitioners of environmental and energy policy low carbon transitions renewable energy technologies climate change action and sustainability in general
