Kim Reid,2002 The first compilation of research and concepts from genetic epistemology that directly addresses issues related to learning The Learning Theory of Piaget and Inhelder emphasizes Piaget s biological model and the importance of regulatory mechanisms rather than stage theory Consequently the impact of feedback from observables in modifying the actions of a person engaged in an activity an idea directly related to traditional learning theory is a key concept in this book Furthermore this text uniquely addresses Barbel Inhelder s important contributions to the Genevan School particularly with respect to her empirical investigations of teaching learning interactions and student strategizing The book also summarizes Piaget s latest thinking on equilibration as well as the Geneven studies on contradiction awareness reflexive abstraction and correspondence as they relate directly or indirectly to learning of all children including children with disabilities Most significantly this volume incorporates essential aspects of Piaget s biological model that were previously available only in untranslated works Finally easily accessible speeches on developmental psychology the theory of stages problems of equilibration and creativity given by Piaget and Inhelder are included in their entirety The foreword to the book was written by Piaget and Inhelder Gifted Children Leta Stetter Hollingworth,1926 The subject that is treated in this volume has engaged a large part of the attention not only of psychologists and educationists but also of laymen It is argued that if nature really endows some children intellectually much more generously than she does others and the data presented in this volume will convince any fair minded person that this is the case the fact is of importance to those who are interested in social advancement as well as to those teachers and parents who are striving to do the best they can for each individual committed to their care A large amount of scientific material is included in this book but it is presented in a straightforward clear interesting manner and it may be predicted that this volume will be read easily and with complete comprehension by parents teachers and laymen as well as by students of human
