Working In A 24 7 Economy:

Working in a 24/7 Economy Harriet B. Presser, 2005-02-05 An economy that operates 24 7 as ours now does imposes extraordinary burdens on workers Two fifths of all employed Americans work mostly during evenings nights weekends or on rotating shifts outside the traditional 9 to 5 work day The pervasiveness of nonstandard work schedules has become a significant social phenomenon with important implications for the health and well being of workers and their families In Working in a 24 7 Economy Harriet Presser looks at the effects of nonstandard work schedules on family functioning and shows how these schedules disrupt marriages and force families to cobble together complex child care arrangements that should concern us all The number of hours Americans work has received ample attention but the issue of which hours or days Americans work has received much less scrutiny Working in a 24 7 Economy provides a comprehensive overview of who works nonstandard schedules and why Presser argues that the growth in women s employment technological change and other demographic changes over the past thirty years gave rise to the growing demand for late shift and weekend employment in the service sector She also demonstrates that most people who work these hours do so primarily because it is a job requirement rather than a choice based on personal considerations Presser shows that the consequences of working nonstandard schedules often differ for men and women since housework and child rearing remain assigned primarily to women even when both spouses are employed As with many other social problems the burden of these schedules disproportionately affects the working poor reflecting their lack of options in the workplace and adding to their disadvantage Presser also documents how such work arrangements have created a new rhythm of daily life within many American families including those with two earners and absent fathers With spouses often not at home together in the evenings or nights and parents often not at home with their children at such times the relatively new concept of home time has emerged as primary concern for families across the nation Employing a wealth of empirical data Working in a 24 7 Economy shows that nonstandard work schedules are both highly prevalent among American families and generate a level of complexity in family functioning that demands greater public attention Presser makes a convincing case for expanded research and meaningful policy initiatives to address this growing social phenomenon

Working in a 24/7 Economy Harriet B. Presser, 2005-02-01 An economy that operates 24 7 as ours now does imposes extraordinary burdens on workers Two fifths of all employed Americans work mostly during evenings nights weekends or on rotating shifts outside the traditional 9 to 5 work day The pervasiveness of nonstandard work schedules has become a significant social phenomenon with important implications for the health and well being of workers and their families In Working in a 24 7 Economy Harriet Presser looks at the effects of nonstandard work schedules on family functioning and shows how these schedules disrupt marriages and force families to cobble together complex child care arrangements that should concern us all The number of hours Americans work has received ample attention but the issue of which hours or days Americans work has received much less scrutiny Working in a

24/7 Economy provides a comprehensive overview of who works nonstandard schedules and why. Presser argues that the growth in women's employment, technological change, and other demographic changes over the past thirty years gave rise to the growing demand for late shift and weekend employment in the service sector. She also demonstrates that most people who work these hours do so primarily because it is a job requirement rather than a choice based on personal considerations. Presser shows that the consequences of working nonstandard schedules often differ for men and women since housework and child rearing remain assigned primarily to women even when both spouses are employed. As with many other social problems, the burden of these schedules disproportionately affects the working poor, reflecting their lack of options in the workplace and adding to their disadvantage. Presser also documents how such work arrangements have created a new rhythm of daily life within many American families, including those with two earners and absent fathers. With spouses often not at home together in the evenings or nights and parents often not at home with their children at such times, the relatively new concept of home time has emerged as a primary concern for families across the nation. Employing a wealth of empirical data, *Working in a 24/7 Economy* shows that nonstandard work schedules are both highly prevalent among American families and generate a level of complexity in family functioning that demands greater public attention. Presser makes a convincing case for expanded research and meaningful policy initiatives to address this growing social phenomenon.

Work-Family Challenges for Low-Income Parents and Their Children. Ann C. Crouter, Alan Booth, 2014-04-04. The area of work and family is a hot topic in the social sciences and appeals to scholars in a wide range of disciplines. There are few edited volumes in this area, however, and this may be the only one that focuses on low-income families, a particularly important group in this era of welfare-to-work policy. Interdisciplinary in nature, the volume brings together contributors from the fields of psychology, social work, sociology, demography, economics, human development, and family studies, and public policy. It presents important work-family topics from the point of view of low-income families at a time in history when welfare-to-work programs have become standard. Divided into four parts, each section addresses a different aspect of the topic, consisting of a big picture lead essay which is followed by three papers that critique, extend, and supplement the final paper. Many of the chapters address important social policy issues, giving the volume an applied focus which will make it of interest to many groups. Serving to organize the volume, these issues and others have been encapsulated into four sets of anchor questions: How has the availability, content, and stability of the jobs available for the working poor changed in recent decades? How do work circumstances for low-income families vary as a function of gender, family structure, race, ethnicity, and geography? What implications do these changes have for the widening inequality between the haves and have-nots? What features of work timing matter for families? What do we know about the impacts of shift work, long hours, seasonal work, and temporary work on employees, their family relationships, and their children's development? How are the

child care needs of low income families being met What challenges do these families face with regard to child care and how can child care services be strengthened to support parents and to enhance child development How are the challenges of managing work and family experienced by low income men and women The primary audience for the book is academicians and their students policy specialists and people charged with developing and evaluating family focused programs The volume will be appropriate for classroom use in upper level undergraduate courses and graduate courses in the fields of family sociology demography human development and family studies women s studies labor studies and social work

Economics Bruce Winton Knight, Nelson Lee Smith, 1930 *The Coming of the 24-hour Economy?* Ignace Glorieux, Inge Mestdag, Joeri Minnen, 2008 Abstract This study mapped the changes in the timing of working hours in Belgium as reported in workers daily work schedules obtained from the Belgian Time Use Surveys of 1966 and 1999 A typology of working schedules was drawn up by means of a sequence analysis This approach showed that work performed beyond the standard times that is in the evening at night or on weekends did not grow in importance in the intervening years In 1999 standard working hours clearly accounted for a larger share of the work schedules of the active population Although the analyses did certainly not corroborate the often alleged trend towards a 24 hour society in Belgium it could be shown that
