World Business Cycles:

Global Business Cycles and Developing Countries Eri Ikeda, 2019-09-17 This book investigates how global business cycles impact the economies of developing countries Global business cycles the wave like movements of economic expansion followed by contraction in aggregate economic activities impact all economies comprising the global economy The patterns being shown in developing countries correspond increasingly to those in the global north and yet there is a relative dearth of studies exploring whether global business cycles exist and how they operate in developing economies This book explores how cycles operate at the global and sub global developing country levels with a particular focus on the level of development and the structure of the economies Drawing an important distinction between cycles and fluctuations the book criticises mainstream conceptualisation and identification of cycle phenomena and instead proposes an alternative conception and methodology for the identification of cycles Along the way the book also delves into the manufacturing and rise of China and other potential competitors in the industrial arena as increasingly important drivers of global cycles and global economic growth This book will be an important read for researchers and upper level students of development economics and international political economy

Global Business Cycles Mr. Ayhan Kose, Mr. Christopher Otrok, Mr. Eswar Prasad, 2008-06-01 This paper analyzes the evolution of the degree of global cyclical interdependence over the period 1960-2005 We categorize the 106 countries in our sample into three groups industrial countries emerging markets and other developing economies Using a dynamic factor model we then decompose macroeconomic fluctuations in key macroeconomic aggregates output consumption and investment into different factors These are i a global factor which picks up fluctuations that are common across all variables and countries ii three group specific factors which capture fluctuations that are common to all variables and all countries within each group of countries iii country factors which are common across all aggregates in a given country and iv idiosyncratic factors specific to each time series Our main result is that during the period of globalization 1985-2005 there has been some convergence of business cycle fluctuations among the group of industrial economies and among the group of emerging market economies Surprisingly there has been a concomitant decline in the relative importance of the global factor In other words there is evidence of business cycle convergence within each of these two groups of countries but divergence or decoupling between them

Economic Cycles Solomos Solomou, 1998 The ups and downs of booms and slumps often referred to as business cycles are features of all modern economies This book considers business cycles over three epochs 1870-1913 1919-1938 and the post World War II period It provides an analysis of the key macroeconomic questions relating to economic fluctuations Why are the ups and down more volatile in some epochs than others Why are some business cycle shocks more persistent in their effects Is there an international business cycle Can present business cycle features predict future patterns What impact will institutional changes such as EMU have on future fluctuations
