**The Shared Mind** Jordan Zlatev, 2008 The cognitive and language sciences are increasingly oriented towards the social dimension of human cognition and communication The hitherto dominant approach in modern cognitive science has viewed social cognition through the prism of the traditional philosophical puzzle of how individuals solve the problem of understanding Other Minds The Shared Mind challenges the conventional theory of mind approach proposing that the human mind is fundamentally based on intersubjectivity the sharing of affective conative intentional and cognitive states and processes between a plurality of subjects The socially shared intersubjective foundation of the human mind is manifest in the structure of early interaction and communication imitation gestural communication and the normative and argumentative nature of language In this path breaking volume leading researchers from psychology linguistics philosophy and primatology offer complementary perspectives on the role of intersubjectivity in the context of human development comparative cognition and evolution and language and linguistic theory *Electric Vehicle Integration in a Smart Microgrid Environment* Mohammad Saad Alam, Mahesh Krishnamurthy, 2021-08-19 Electric Vehicle Integration in a Smart Microgrid Environment The growing demand for energy in today s world especially in the Middle East and Southeast Asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants In order to mitigate the issues arising from conventional internal combustion engine powered vehicles there has been a considerable acceleration in the adoption of electric vehicles EVs Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimized by smart microgrids As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment Practical issues such as fleet management coordinated operation repurposing of batteries and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure This book explores such a perspective with contributions from leading experts on planning analysis optimization and management of electrified transportation and the transportation infrastructure The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry business and consumer applications We expect the book to serve as a reference for a larger audience including power system architects practitioners developers new researchers and graduate level students especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia
