Space Time:

Towards a Theory of Spacetime Theories Dennis Lehmkuhl,Gregor Schiemann,Erhard Scholz,2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally *Space, Time, and Stuff* Frank Arntzenius,Cian Seán Dorr,2012-01-19 Frank Arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure He argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist **Space, Time, and Spacetime** Lawrence Sklar,1977-03-15 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy The arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories **Man and the Cosmos** Joseph Alexander Leighton,1922 Science John Michels (Journalist),1925 *The Ways of Knowing* William Pepperell Montague,1925 **Mind** ,1916 A journal of philosophy covering epistemology metaphysics philosophy of language philosophy of logic and philosophy of mind **The Large Scale Structure of Space-Time** Stephen Hawking,G. F. R. Ellis,1973 This 1973 book discusses Einstein s General Theory of Relativity and its predictions concerning black holes and singularities in space time itself Einstein's Theories of Relativity and Gravitation James Malcolm Bird,1921 Einstein s theory of relativity confounded and excited both professional and amateur scientists with its explanation of the intricacies of

how the world and the universe truly work rather than how people wished or believed they worked His view of relativity dismantled Newton s theory of space and time as absolutes adding the concept of curved space time which deals with the velocity of motion Einstein explains his theory of physics in a way that was designed not only for scientists with a knowledge of the complicated math involved but for the general reader as well   *The Science of Space-time* Derek J.
