Teaching Statistics Using Baseball Jim Albert, 2022-02-04 Teaching Statistics Using Baseball is a collection of case studies and exercises applying statistical and probabilistic thinking to the game of baseball Baseball is the most statistical of all sports since players are identified and evaluated by their corresponding hitting and pitching statistics There is an active effort by people in the baseball community to learn more about baseball performance and strategy by the use of statistics This book illustrates basic methods of data analysis and probability models by means of baseball statistics collected on players and teams Students often have difficulty learning statistics ideas since they are explained using examples that are foreign to the students The idea of the book is to describe statistical thinking in a context that is baseball that will be familiar and interesting to students The book is organized using a same structure as most introductory statistics texts There are chapters on the analysis on a single batch of data followed with chapters on comparing batches of data and relationships There are chapters on probability models and on statistical inference The book can be used as the framework for a one semester introductory statistics class focused on baseball or sports This type of class has been taught at Bowling Green State University It may be very suitable for a statistics class for students with sports related majors such as sports management or sports medicine Alternately the book can be used as a resource for instructors who wish to infuse their present course in probability or statistics with applications from baseball The second edition of Teaching Statistics follows the same structure as the first edition where the case studies and exercises have been replaced by modern players and teams and the new types of baseball data from the PitchFX system and fangraphs.com are incorporated into the text
