## **World According To Pimm:**

**The World According To Pimm: A Scientist Audits the Earth** Stuart Pimm, 2001-08-10 Take a globe circling tour of our endangered planet with conservation biologist Stuart Pimm who is taking stock and keeping score We use 50 percent of the world's freshwater supply We consume 42 percent of the world's plant growth We are liquidating animals and plants 100 times faster than the natural rate of extinction Such numbers should make it clear that the human impact on our planet has been and continues to be extreme and detrimental Yet even after decades of awareness of our environmental peril there remains passionate disagreement over what the problems are and how they should be remedied Much of the impasse stems from the fact that the problems are difficult to quantify How do we assess the impact of habitat loss on various species when we haven't even counted them all And just what factors go into that 42 percent of biomass we are hungrily consuming It is only through an understanding of the numbers that we will be able to break that impasse and come to agreement Working on the front lines of conservation biology Stuart Pimm is one of the pioneers whose work has put the science in environmental science In this book he appoints himself investment banker of the global biological accounts checking the numbers gathered by tireless scientists in work that is always painstaking and often heartbreaking Pimm explains the numerical results in lucid prose With wit passion and candor he reveals the importance of understanding where those numbers come from and what they mean To do so he takes the reader on a globe circling tour of our beautiful but weary planet With Pimm as our indomitable guide we travel from the volcanic mountains and rainforests of Hawaii to the boreal forests of Siberia We see a blue whale off the Pacific coast of Mexico where the blue oceans are slowly turning to barren deserts We go birdwatching high up in the leafy canopy of the Amazon from which we can see the hundreds of smoke plumes busily working at deforestation At times the view looks rather grim But Pimm is no Cassandra he never preaches or scolds Ever optimistic this book presents a world filled with mysterious beauty the infinite variety of nature and an urgent hope that through an understanding of our planet's environmental past and present we will be inspired to save it from future extinction This book is unashamedly optimistic It is a celebration of our spectacular and fascinating world I have made no attempt to restrain my joy as I encounter its natural history and its peoples By the time you read the Epilogue you will know that our world is not doomed it is not fatally wounded but neither is it healthy It needs attention Stuart Pimm from the Prologue

**5 Easy Pieces** Daniel Pauly, 2010-07-28 5 Easy Pieces features five contributions originally published in Nature and Science demonstrating the massive impacts of modern industrial fisheries on marine ecosystems Initially published over an eight year period from 1995 to 2003 these articles illustrate a transition in scientific thought from the initially contested realization that the crisis of fisheries and their underlying ocean ecosystems was in fact global to its broad acceptance by mainstream scientific and public opinion Daniel Pauly a well known fisheries expert who was a co author of all five articles presents each original article here and surrounds it with a rich array of contemporary comments many of which led Pauly and his

colleagues to further study This wonderfully reflective structure dramatically illustrates how science and society influence one another sometimes to the betterment of both
