Async Communication Toolkit:

Middleware for Communications Qusay Mahmoud,2005-06-10 A state of the art guide to middleware technologies and their pivotal role in communications networks Middleware is about integration and interoperability of applications and services running on heterogeneous computing and communications devices The services it provides including identification authentication authorization soft switching certification and security are used in a vast range of global appliances and systems from smart cards and wireless devices to mobile services and e Commerce Qusay H Mahmoud has created an invaluable reference tool that explores the origins and current uses of middleware highlighting the importance of such technologies as CORBA J2EE and JMS and has thus compiled the roadmap to future research in this area Middleware for Communications discusses the emerging fields of Peer to Peer P2P and grid middleware detailing middleware platforms such as JXTA and the Globus middleware toolkit shows how Middleware will play a significant role in mobile computing presents a Platform Supporting Mobile Applications PLASMA a middleware platform that consists of components for location event and profile handling of Location Based Services introduces middleware security focusing on the appropriate aspects of CORBA J2EE and NET and demonstrates how to realize complex security capabilities such as role based access control RBAC and mandatory access control MAC discusses how Quality of Service QoS component middleware can be combined with Model Driven Architecture MDA technologies to rapidly develop generate assemble and deploy flexible communications applications This incomparable overview of middleware for communications is suitable for graduate students and researchers in communications and computing departments It is also an authoritative guide for engineers and developers working on distributed systems mobile computing and networked appliances

Digital Leadership Zuri Deepwater, AI, 2025-03-03

Digital Leadership explores the critical skills and strategies necessary for thriving in today's digitally driven business landscape It emphasizes the importance of not just adopting new technologies but fundamentally rethinking organizational structures to foster a digital first culture The book also provides actionable strategies for managing virtual teams crucial in an era where organizations that master remote collaboration gain a significant competitive advantage For example leaders learn how to implement communication protocols that help geographically dispersed teams feel more connected The book progresses systematically beginning with a definition of digital leadership and an outline of the challenges and opportunities presented by digital transformation It then explores essential components such as building a digital strategy and fostering innovation Later chapters address the practical aspects of managing virtual teams culminating in a discussion of the ethical and social implications of digital technologies The book distinguishes itself through its pragmatic approach offering tools and strategies that leaders can implement immediately while also acknowledging the potential risks associated with technology

Integrated Network Management VIII Germán Goldszmidt, Schönwälder Jürgen, 2013-06-05 Welcome to 1M 2003 the eighth in a series of the premier international technical conference in this field As IT management has become mission critical to the economies of the developed world our technical program has grown in relevance strength and quality Over the next few years leading IT organizations will gradually move from identifying infrastructure problems to providing business services via automated intelligent management systems To be successful these future management systems must provide global scalability for instance to support Grid computing and large numbers of pervasive devices In Grid environments organizations can pool desktops and servers dynamically creating a virtual environment with huge processing power and new management challenges As the number type and criticality of devices connected to the Internet grows new innovative solutions are required to address this unprecedented scale and management complexity The growing penetration

of technologies such as WLANs introduces new management challenges particularly for performance and security Management systems must also support the management of business processes and their supporting technology infrastructure as integrated entities They will need to significantly reduce the amount of adventitious bootless data thrown at consoles delivering instead a cogent view of the system state while leaving the handling of lower level events to self managed multifarious systems and devices There is a new emphasis on autonomic computing building systems that can perform routine tasks without administrator intervention and take prescient actions to rapidly recover from potential software or hardware failures
