Spatial Econometrics: Methods and Models L. Anselin, 1988-08-31 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Spatial Econometrics L. Anselin, 2014-01-15 **Spatial Econometrics** Giuseppe Arbia, Badi H. Baltagi, 2008-11-14 Spatial Econometrics is a rapidly evolving field born from the joint efforts of economists statisticians econometricians and regional scientists The book provides the reader with a broad view of the topic by including both methodological and application papers Indeed the application papers relate to a number of diverse scientific fields ranging from hedonic models of house pricing to demography from health care to regional economics from the analysis of R D spillovers to the study of retail market spatial characteristics Particular emphasis is given to regional economic applications of spatial econometrics methods with a number of contributions specifically focused on the spatial concentration of economic activities and agglomeration regional paths of economic growth regional convergence of income and productivity and the evolution of regional employment Most of the papers appearing in this book were solicited from the International Workshop on Spatial Econometrics and Statistics held in Rome Italy in 2006

Spatial Econometrics: Methods and Models L. perspective with a comprehensive treatment of methodological issues in spatial analysis *Spatial Econometric Methods in Agricultural Economics Using R* Paolo Postiglione, Roberto Benedetti, Federica Piersimoni, 2021-12-22 Modern tools such as GIS and remote sensing are increasingly used in the monitoring of agricultural resources The developments in GIS technology offer growing opportunities to agricultural economics analysts dealing with large and detailed spatial databases allowing them to combine spatial information from different sources and to produce different models The availability of these valuable sources of information makes the advanced models suggested in the spatial statistic and econometric literature applicable to agricultural economics This book aims at supporting stakeholders to design spatial surveys for agricultural data and or to analyse the geographically collected data This book attempts to describe the main typology of agricultural data and the most appropriate methods for the analysis together with a detailed description of the available data sources and their collection methods Topics such as spatial interpolation point patterns spatial autocorrelation survey data analysis small area estimation regional data modelling and spatial econometrics techniques are covered jointly with issues arising from the integration of several data types The theory of spatial methods is complemented by real and or simulated examples implemented through the open source software R [Advances in Spatial Econometrics](#) Luc Anselin, Raymond Florax, Sergio J. Rey, 2013-03-09 The volume on New Directions in Spatial Econometrics appeared in 1995 as one of the first in the then new Springer series on Advances in Spatial Sciences It very quickly became evident that the book satisfied a pent up demand for a collection of advanced papers dealing with the methodology and application of spatial econometrics This emerging subfield of applied econometrics focuses on the incorporation of location and spatial interaction in the specification estimation and diagnostic testing of regression models The current effort is a follow up to the New Directions volume Even though the number of empirical and theoretical journal articles dealing with various aspects of spatial econometrics has grown tremendously in the recent past the need remained to bring together an advanced collection on methodology tools and applications This volume contains several papers that were presented at special sessions on spatial econometrics organized as part of a number of conferences of the Regional Science Association International In addition a few papers were invited for submission All papers were refereed The focus in the volume reflects the advances made in the field in recent years

Introduction to Spatial Econometrics James LeSage, Robert Kelley Pace, 2009-01-20 Although interest in spatial regression models has surged in recent years a comprehensive up to date text on these approaches does not exist Filling this void *Introduction to Spatial Econometrics* presents a variety of regression methods used to analyze spatial data samples that violate the traditional assumption of independence between observations **Spatial Econometric Methods in Agricultural Economics Using R** Paolo Postiglione, Roberto Benedetti, Federica Piersimoni, 2021-12-22 Modern tools such as GIS and remote sensing are increasingly used in the monitoring of agricultural resources The developments in GIS technology offer growing opportunities to agricultural economics analysts dealing with large and detailed spatial databases allowing them to

combine spatial information from different sources and to produce different models The availability of these valuable sources of information makes the advanced models suggested in the spatial statistic and econometric literature applicable to agricultural economics This book aims at supporting stakeholders to design spatial surveys for agricultural data and or to analyse the geographically collected data This book attempts to describe the main typology of agricultural data and the most appropriate methods for the analysis together with a detailed description of the available data sources and their collection methods Topics such as spatial interpolation point patterns spatial autocorrelation survey data analysis small area estimation regional data modelling and spatial econometrics techniques are covered jointly with issues arising from the integration of several data types The theory of spatial methods is complemented by real and or simulated examples implemented through the open source software R

Spatial Econometrics Giuseppe Arbia, 2016-08-31 Spatial econometrics can be defined in a narrow and in a broader sense In a narrow sense it refers to methods and techniques for the analysis of regression models using data observed within discrete portions of space such as countries or regions In a broader sense it is inclusive of the models and theoretical instruments of spatial statistics and spatial data analysis to analyze various economic effects such as externalities interactions spatial concentration and many others Indeed the reference methodology for spatial econometrics lies on the advances in spatial statistics where it is customary to distinguish between different typologies of data that can be encountered in empirical cases and that require different modelling strategies A first distinction is between continuous spatial data and data observed on a discrete space Continuous spatial data are very common in many scientific disciplines such as physics and environmental sciences but are still not currently considered in the spatial econometrics literature Discrete spatial data can take the form of points lines and polygons Point data refer to the position of the single economic agent observed at an individual level Lines in space take the form of interactions between two spatial locations such as flows of goods individuals and information Finally data observed within polygons can take the form of predefined irregular portions of space usually administrative partitions such as countries regions or counties within one country

Spatial Econometrics J. Paul Elhorst, 2013-09-30 This book provides an overview of three generations of spatial econometric models models based on cross sectional data static models based on spatial panels and dynamic spatial panel data models The book not only presents different model specifications and their corresponding estimators but also critically discusses the purposes for which these models can be used and how their results should be interpreted

Spatial Econometrics Harry Kelejian, Gianfranco Piras, 2017-07-20 Spatial Econometrics provides a modern powerful and flexible skillset to early career researchers interested in entering this rapidly expanding discipline It articulates the principles and current practice of modern spatial econometrics and spatial statistics combining rigorous depth of presentation with unusual depth of coverage Introducing and formalizing the principles of and need for models which define spatial interactions the book provides a comprehensive framework for almost every major facet of modern science Subjects covered at length include spatial

regression models weighting matrices estimation procedures and the complications associated with their use The work particularly focuses on models of uncertainty and estimation under various complications relating to model specifications data problems tests of hypotheses along with systems and panel data extensions which are covered in exhaustive detail Extensions discussing pre test procedures and Bayesian methodologies are provided at length Throughout direct applications of spatial models are described in detail with copious illustrative empirical examples demonstrating how readers might implement spatial analysis in research projects Designed as a textbook and reference companion every chapter concludes with a set of questions for formal or self study Finally the book includes extensive supplementing information in a large sample theory in the R programming language that supports early career econometricians interested in the implementation of statistical procedures covered Combines advanced theoretical foundations with cutting edge computational developments in R Builds from solid foundations to more sophisticated extensions that are intended to jumpstart research careers in spatial econometrics Written by two of the most accomplished and extensively published econometricians working in the discipline Describes fundamental principles intuitively but without sacrificing rigor Provides empirical illustrations for many spatial methods across diverse field Emphasizes a modern treatment of the field using the generalized method of moments GMM approach Explores sophisticated modern research methodologies including pre test procedures and Bayesian data analysis

Spatial Econometrics and Spatial Statistics A. Getis, J. Lacambra, H. Zoller, 2004-02-24 The field of spatial econometrics has come to include the methods and models that deal with estimation and testing problems encountered when attempting to implement regional economic models Those problems are often characterized by the difficulties associated with assessing the importance of spatial dependence and spatial heterogeneity This book includes contributions on spatial proximity spatial patterning and in particular the spatial association dependence contained in local map patterns

Economic Geography with Spatial Econometrics Bernard Fingleton, 1999 **A Primer for Spatial Econometrics** G. Arbia, 2014-06-30 This book aims at meeting the growing demand in the field by introducing the basic spatial econometrics methodologies to a wide variety of researchers It provides a practical guide that illustrates the potential of spatial econometric modelling discusses problems and solutions and interprets empirical results *Cross Sectional Dependence in Spatial Econometric Models* Stefan Klotz, 2004 This book is concerned with spatial dependence in econometric models offering a work of reference to the applied researcher In economics spatial aspects are usually somewhat disregarded which as is shown and quantified here may seriously impair research results It presents the basic tool kit of treating cross sectional dependence which typically occurs between spatial observations The methods are introduced as straightforward enhancement of standard econometric models and methods placing emphasis on the practical aspects of their features

JOURNAL OF ECONOMETRICS, 2004 **Inference Based on Alternative Bootstrapping Methods in Spatial Models with an Application to County Income Growth in the United States** Daniel C. Monchuk, 2010 This study

examines aggregate county income growth across the 48 contiguous states from 1990 to 2005 To control for endogeneity we estimate a two stage spatial error model and infer parameter significance by implementing a number of spatial bootstrap algorithms We find that outdoor recreation and natural amenities favor positive growth in rural counties densely populated rural areas enjoy stronger growth and property taxes correlate negatively with rural growth We also compare estimates from the aggregate county income growth model with per capita income growth and find that these two growth processes can be quite different

Spatial Econometrics: Spatial Autoregressive Models Lung-fei Lee, 2023-10-16 This is the most recently developed book in Spatial Econometrics which cover important models and estimation methods Its coverage is rather broad and some of the topics covered have only been developed in the recent econometric literature in spatial econometrics The book summarizes our devoted efforts on spatial econometrics that represent joint contributions with former PhD advisees from the Ohio State University in Columbus Ohio USA The coverage is comprehensive and there are a total of sixteen chapters from basic statistics and statistical theory of linear quadratic forms law of large numbers LLN and central limit theory CLT on martingales to nonlinear spatial mixing and spatial near epoch dependence theories which can justify the statistic inferences for various spatial models and their estimation New estimation and testing approaches in empirical likelihood and general empirical likelihood and Bootstrapping are presented Model selection is also discussed in this book In addition to the popular spatial autoregressive models there are chapters on multivariate SAR models simultaneous SAR models and panel dynamic spatial models Recent econometric developments on intertemporal spatial models with rational expectations and flows data in trade theory will also be included In terms of statistics classical estimation testing and inference are the main concerns and we provide classical inference for the justification of Bayesian simulation approaches

Spatial Econometrics using Microdata Jean Dubé, Diègo Legros, 2014-09-25 This book provides an introduction to spatial analyses concerning disaggregated or micro spatial data Particular emphasis is put on spatial data compilation and the structuring of the connections between the observations Descriptive analysis methods of spatial data are presented in order to identify and measure the spatial global and local dependency The authors then focus on autoregressive spatial models to control the problem of spatial dependency between the residues of a basic linear statistical model thereby contravening one of the basic hypotheses of the ordinary least squares approach This book is a popularized reference for students looking to work with spatialized data but who do not have the advanced statistical theoretical basics
