Spatial Hysteresis And Optical Patterns:

Spatial Hysteresis and Optical Patterns Nikolay N. Rosanov, 2013-03-09 This book addresses a subject at the crossing point of two lines of investigation synergetics and modern nonlinear optics First the book is devoted to optical patterns that previously were mainly attributed to the display of instabilities of homogeneous field distributions Second we deal with optical bistability and hysteresis which historically were studied predominantly for point lumped spatially nondistributed systems In the book which seems to be the first monograph devoted to optical patterns I attempt to demonstrate that the variety of optical patterns and other synergetical phenomena is especially rich in spatially distributed bistable systems and that instabilities of homogeneous states are not necessary for the formation of the patterns Of special interest are patterns such as dissipative optical solitons which individually have particle like features and when combined resemble molecules crystals biological objects and even social groups Another essential point is the key role of inhomogeneities of bistable systems As for hysteresis it has been studied mostly in point systems in which with fixed characteristics of the input signal one of several sets of steady state output signal characteristics can form depending on the prehistory In spatially distributed optical systems the kinetics of hysteresis acquires the form of spatial hysteresis or hysteresis of spatial distributions of field characteristics This problem of stereoscopic vision of such hysteresis was solved in optical bistability some 20 years ago and the concepts proposed were later confirmed and expanded

Lecture Notes On Turbulence And Coherent Structures In Fluids, Plasmas And Nonlinear Media Horst Punzmann, 2006-11-29 This book is based on the lectures delivered at the 19th Canberra International Physics Summer School held at the Australian National University in Canberra Australia in January 2006 The problem of turbulence and coherent structures is of key importance in many fields of science and engineering It is an area which is vigorously researched across a diverse range of disciplines such as theoretical physics oceanography atmospheric science magnetically confined plasma nonlinear optics etc Modern studies in turbulence and coherent structures are based on a variety of theoretical concepts numerical simulation techniques and experimental methods which cannot be reviewed effectively by a single expert The main goal of these lecture notes is to introduce state of the art turbulence research in a variety of approaches theoretical numerical simulations and experiments and applications fluids plasmas geophysics nonlinear optical media by several experts A smooth introduction is presented to readers who are not familiar with the field while reviewing the most recent advances in the area This collection of lectures will provide a useful review for both postgraduate students and researchers new to the advancements in this field as well as specialists seeking to expand their knowledge across different areas of turbulence research

Dissipative Solitons Nail Akhmediev, Adrian Ankiewicz, 2005-04-25 This volume is devoted to the exciting topic of dissipative solitons i.e pulses or spatially localised waves in systems exhibiting gain and loss Examples are laser systems nonlinear resonators and optical transmission lines The physical principles and mathematical concepts are explained in a clear and concise way suitable for

students and young researchers The similarities and differences in the notion of a soliton between dissipative systems and Hamiltonian and integrable systems are discussed and many examples are given The contributions are written by the world's leading experts in the field making it a unique exposition of this emerging topic

Structural Nonlinear Dynamics and Diagnosis Mohamed Belhaq, 2015-08-13 This book which presents the peer reviewed post proceedings of CSNDD 2012 and CSNDD 2014 addresses the important role that relevant concepts and tools from nonlinear and complex dynamics could play in present and future engineering applications It includes 22 chapters contributed by outstanding researchers and covering various aspects of applications including structural health monitoring diagnosis and damage detection experimental methodologies active vibration control and smart structures passive control of structures using nonlinear energy sinks vibro impact dynamic MEMS NEMS AFM energy harvesting materials and structures and time delayed feedback control as well as aspects of deterministic versus stochastic dynamics and control of nonlinear phenomena in physics Researchers and engineers interested in the challenges posed and opportunities offered by nonlinearities in the development of passive and active control strategies energy harvesting novel design criteria modeling and characterization will find the book to be an outstanding introduction

Dissipative Solitons: From Optics to Biology and Medicine Nail Akhmediev, Adrian Ankiewicz, 2008-08-26 The dissipative soliton concept is a fundamental extension of the concept of solitons in conservative and integrable systems It includes ideas from three major sources namely standard soliton theory developed since the 1960s nonlinear dynamics theory and Prigogine's ideas of systems far from equilibrium These three sources also correspond to the three component parts of this novel paradigm This book explains the above principles in detail and gives the reader various examples

Progress in Optics Emil Wolf, 2005-10-11 In this volume six review articles which cover a broad range of topics of current interest in modern optics are included The first article by S Saltiel A A Sukhorukov and Y S Kivshar presents an overview of various types of parametric interactions in nonlinear optics which are associated with simultaneous phase matching of several optical processes in quadratic non linear media the so called multi step parametric interactions The second article by H E Tureci H G L Schwefel Ph Jacquod and A D Stone reviews the progress that has been made in recent years in the understanding of modes in wave chaotic systems The next article by C P Search and P Meystre reviews some important recent developments in non linear optics and in quantum optics The fourth article by E Hasman G Biener A Niv and V Kleiner discusses space variant polarization manipulation The article reviews both theoretical analysis and experimental techniques The article which follows by A S Desyatnikov L Torner and Y S Kivshar presents an overview of recent researches on optical vortices and phase singularities of electromagnetic waves in different types of non linear media with emphasis on the properties of vortex solitons The concluding article by K Iwata presents a review of imaging techniques with X rays and visible light in which phase of the radiation that penetrates through a transparent object plays an important part

Quodons in Mica Juan F. R. Archilla, Noé Jiménez, Victor J. Sánchez-Morcillo, Luis M. García-Raffi, 2015-07-31 This

book presents the current knowledge about nonlinear localized travelling excitations in crystals Excitations can be vibrational electronic magnetic or of many other types in many different types of crystals as silicates semiconductors and metals The book is dedicated to the British scientist FM Russell recently turned 80 He found 50 years ago that a mineral mica muscovite was able to record elementary charged particles and much later that also some kind of localized excitations he called them quodons was also recorded The tracks therefore provide a striking experimental evidence of quodons existence The first chapter by him presents the state of knowledge in this topic It is followed by about 18 chapters from world leaders in the field reviewing different aspects materials and methods including experiments molecular dynamics and theory and also presenting the latest results The last part includes a personal narration of FM Russell of the deciphering of the marks in mica It provides a unique way to present the science in an accessible way and also illustrates the process of discovery in a scientist s mind
