

The Price Of Access

Sebastian Brünink

The Price Of Access:

Access Points Sean D. Ehrlich,2011-09-26 Access Points develops a new theory about how democratic institutions influence policy outcomes Access Point Theory argues that the more points of access that institutions provide to interest groups the cheaper lobbying will be and thus the more lobbying will occur This will lead to more complex policy as policymakers insert specific provisions to benefit special interests and if one side of the debate has a lobbying advantage to more biased policy as the advantaged side is able to better take advantage of the cheaper lobbying This book then uses Access Point Theory to explain why some countries have more protectionist and more complex trade policies than other why some countries have stronger environmental and banking regulations than others and why some countries have more complicated tax codes than others In policy area after policy area this book finds that more access points lead to more biased and more complex policy Access Points provides scholars with a powerful tool to explain how political institutions matter and why countries implement the policies they do Implications of Ultra-Low-Cost Access to Space Todd Harrison,Andrew Hunter,Kaitlyn Johnson,Thomas Roberts,2017-04-03 Since the advent of the space age a primary constraint on military commercial and civil space missions has been the cost of launch Launching objects into space requires substantial investments in launch systems and infrastructure which has restricted the market to only a handful of national governments and several large private companies This study explores the possibility of a space industry significantly less constrained by the cost of access to space **Access 2007: The Missing Manual** Matthew MacDonald,2007 Written from the ground up for this redesigned application this guide will help readers design and maintain complete databases search for valuable nuggets of information and build attractive forms for quick and easy data entry **Universal Service** United States. Congress. Senate. Committee on Commerce, Science, and Transportation,2000 *The Scots Revised Reports* Alexander Dunlop,1903 **Regulation and Entry into Telecommunications Markets** Paul de Bijl,Martin Peitz,2003-01-09 This book analyses telecommunications markets from early to mature competition filling the gap between the existing economic literature on competition and the real life application of theory to policy Paul De Bijl and Martin Peitz focus on both the transitory and the persistent asymmetries between telephone companies investigating the extent to which access price and retail price regulation stimulate both short and long term competition They explore and compare various settings such as non linear versus linear pricing facilities based versus unbundling based or carrier select based competition non segmented versus segmented markets On the basis of their analysis De Bijl and Peitz then formulate guidelines for policy This book is a valuable resource for academics regulators and telecommunications professionals It is accompanied by simulation programs devised by the authors both to establish and to illustrate their results *An Economic Analysis of Mandatory Leased Channel Access for Cable Television* Stanley M. Besen,Leland L. Johnson,Rand Corporation,1982 This report is an economic analysis of mandated leased access Section II briefly discusses past regulation of the cable industry including the regulation

of access Section III examines the existing relationship between cable systems and service packagers Section IV provides an economic analysis of the effects of various types of mandated leased access arrangements on the service offerings and prices available to cable subscribers Finally Sec V analyzes problems that would be faced by government regulators in implementing a leased access requirement

The Economics of Antitrust and Regulation in Telecommunications

Pierre A. Buigues, Patrick Rey, 2004-01-01 Contributing to a convergence of legal and economic approaches The Economics of Antitrust and Regulation in Telecommunications integrates economic theory into current EU antitrust policy within the sector The book addresses the role of competition and regulatory policies on a number of key issues in telecommunications such as market definition collective dominance access to networks and allocation of scarce resources

Competition and Cross-subsidization in the Telephone Industry Leland L. Johnson, Rand Corporation, 1982 The purposes of this study are 1 to show why the Federal Communications Commission has permitted progressively greater competition in interstate telephone services 2 to assess the Commission's ability to handle problems of cross subsidization that have arisen from competition by drawing from the history of its major rate investigations 3 to trace the policy implications of this experience for the continued rate regulation of interstate telephone service and 4 to examine the conflict between economic efficiency and the desire to maintain low local telephone rates a conflict exacerbated by the fact that competition makes less sustainable the subsidization of local service by interstate services
