**The Lateral Line System** Sheryl Coombs, Horst Bleckmann, Richard R. Fay, Arthur N. Popper, 2013-10-23 The Lateral Line System provides an overview of the key concepts and issues surrounding the development evolution neurobiology and function of the lateral line a fascinating yet somewhat enigmatic flow sensing system The book examines the historical precedence for linking the auditory and lateral line systems its structure and development use of the lateral line system of zebrafish as a model system physical principles governing the response properties of the lateral line the behavioral relevance of this sensory system to the lives of fish and an examination of how this information is shaped and encoded by the peripheral and central nervous systems Contents The Gems of the Past A Brief History of Lateral Line Research in the Context of the Hearing Sciences Sheryl Coombs and Horst Bleckmann Morphological Diversity Development and Evolution of the Mechanosensory Lateral Line System Jacqueline F Webb The Hydrodynamic of Flow Stimuli Matthew J McHenry and James C Liao The Biophysics of the Fish Lateral Line Sietse M van Netten and Matthew J McHenry Sensory Ecology and Neuroethology of the Lateral Line John Montgomery Horst Bleckmann and Sheryl Coombs Information Encoding and Processing by the Peripheral Lateral Line System Boris Philippe Chagnaud and Sheryl Coombs The Central Nervous Organization of the Lateral Line System Mario F Wullmann and Benedikt Grothe Central Processing of Lateral Line Information Horst Bleckmann and Joachim Mogdans Functional Overlap and Nonoverlap Between Lateral Line and Auditory Systems Christopher B Braun and Olav Sand The Hearing Loss Protection and Regeneration in the Larval Zebrafish Lateral Line Allison B Coffin Heather Brignull David W Raible and Edwin W Rubel

**The Mechanosensory Lateral Line** Sheryl Coombs, Peter Görner, Heinrich Münz, 2012-12-06 This volume represents the published proceedings of an international conference on the Neurobiology and Evolution of the Mechanosensory Lateral Line System held August 31 to September 4 1987 at the Center for Interdisciplinary Research at the University of Bielefeld West Germany The goal of this conference was to bring together researchers from all over the world to share information about a major aquatic sensory system the evolution and function of which have largely remained an enigma since the 18th century The lateral line or lateralis system has been used as an umbrella term to describe what originally without the aid of modern anatomical techniques looked like a series of pits grooves and lines on the head and trunk of fishes and some amphibians For at least the past 30 years however it has been recognized that the lateralis system comprises not one but at least two functional classes of receptors mechanoreceptors and electroreceptors The relative ease with which the appropriate stimulus could be defined and measured for the electroreceptive class has resulted in an explosion of information on this submodality during the past 20 years As a result there is little ambiguity about the overall function of the electrosensory system now generally regarded as an independent system in its own right A similarly clear definition for the function of the mechanosensory lateralis system has not been as forthcoming
