Tony Hunt's Structures Notebook Elsevier Science & Technology,2004-06 **Tony Hunt's Structures Notebook** Tony Hunt,2007-08-22 The purpose of the Structures Notebook is to explain in the simplest possible terms about the structure of things and to demonstrate the fact that everything you see and touch live in and use living and man made has a structure which is acted upon by natural forces and reacts to these forces according to its form and material The Structures Notebook was originally written by Tony Hunt as a brief teaching aid for students at the Royal College of Art who had very little if any knowledge of physics or structural behaviour It has now been expanded and with this second edition updated into a more comprehensive book while retaining a simple visual and non mathematical approach to structures The book is divided into seven main sections in a logical sequence and is written in simple language Each section related to its text has a comprehensive set of hand drawn sketches which show as simply as possible what the text is about The book is almost totally non mathematical since the author believes very strongly that structural behaviour can be understood best by diagrams and simple descriptions and that mathematics for the majority of people interested in design is a barrier The design of structures is a combination of art and science and to achieve the best solution concept should always come before calculation **Tony Hunt's Structures Notebook** Anthony Hunt,2003 This book is the ideal introduction to the topic of structure It demonstrates that everything you see touch live in and use has a structure which is acted upon by natural forces and which reacts to these forces according to its form and material back cover **Tony Hunt's Structures Notebook** Tony Hunt,2015-12 The purpose of the Structures Notebook is to explain in the simplest possible terms about the structure of things and to demonstrate the fact that everything you see and touch live in and use living and man made has a structure which is acted upon by natural forces and reacts to these forces according to its form and material The Structures Notebook was originally written by Tony Hunt as a brief teaching aid for students at the Royal College of Art who had very little if any knowledge of physics or structural behaviour It has now been expanded and with this second edition updated into a more comprehensive book while retaining a simple visual and non mathematical approach to structures The book is divided into seven main sections in a logical sequence and is written in simple language Each section related to its text has a comprehensive set of hand drawn sketches which show as simply as possible what the text is about The book is almost totally non mathematical since the author believes very strongly that structural behaviour can be understood best by diagrams and simple descriptions and that mathematics for the majority of people interested in design is a barrier The design of structures is a combination of art and science and to achieve the best solution concept should always come before calculation Tony Hunt's Sketchbook Anthony Hunt,1999 Tony Hunt s Structures Notebook was a basic primer on structural engineering in a visual and non mathematical form Tony Hunt s Sketchbook illustrates the connection between brain and hand in conceiving structural concepts and details as possible solutions to structures in architecture Drawing is an important tool for initial

communication of ideas Design concepts originate in the mind and are transferred roughly and quickly to paper as freehand sketches These sketches illustrate alternative structural concepts ideas and details for discussions with the design team The drawings in this sketchbook are a selection from notebooks produced by Tony Hunt over the last 30 or so years They relate directly to projects built and unbuilt in the field of structural engineering The author has worked extensively with most of the well known architects in this country and some abroad The sketches represent early thoughts and structural ideas on a wide range of projects both large and small They were either produced at the time of relevant design meetings or as a response to a problem posed by an architect and are therefore a record ideas proposed at the particular time In most cases a range of structural alternatives are proposed Sometimes the first idea was the one adopted All drawings are freehand The style and approach has varied over the years and has become freer in later years but all are by the author World famous author the first Engineer s sketchbook in the UK Tony Hunt is well known for his sketches Companion volume to the successful Tony Hunt s Structures Notebook Building Structures Illustrated Francis D. K. Ching, Barry S. Onouye, Douglas Zuberbuhler, 2014-03-04 A new edition of Francis D K Ching s illustrated guide to structural design Structures are an essential element of the building process yet one of the most difficult concepts for architects to grasp While structural engineers do the detailed consulting work for a project architects should have enough knowledge of structural theory and analysis to design a building Building Structures Illustrated takes a new approach to structural design showing how structural systems of a building such as an integrated assembly of elements with pattern proportions and scale are related to the fundamental aspects of architectural design The book features a one stop guide to structural design in practice a thorough treatment of structural design as part of the entire building process and an overview of the historical development of architectural materials and structure Illustrated throughout with Ching s signature line drawings this new Second Edition is an ideal guide to structures for designers builders and students Updated to include new information on building code compliance additional learning resources and a new glossary of terms Offers thorough coverage of formal and spatial composition program fit coordination with other building systems code compliance and much more Beautifully illustrated by the renowned Francis D K Ching Building Structures Illustrated Second Edition is the ideal resource for students and professionals who want to make informed decisions on architectural design Structure and Architecture Angus J Macdonald, 2007-06-07 Structure and Architecture is an essential textbook for students and practitioners of architecture and structural engineering MacDonald explains the basic principles of structure and describes the ranges of structure types in current use Furthermore the book links these topics directly with the activity of architectural design and criticism An update of the first edition Structure and Architecture 2ed includes a revised opening chapter and a new section that discusses prominent buildings constructed since the last edition was published in 1994 Angus MacDonald deals with structures holistically relating detailed topics back to the whole structure and building He aims to answer the questions What are

architectural structures How does one define the difference between the structure of a building and all of the other components and elements of which it consists What are the requirements of structures What is involved in their design An understanding of the concepts involved in answering these questions and an appreciation of how the structure of a building functions enhances the ability of an individual to appreciate its architectural quality This book is unique in that it discusses the structural component of architectural design in the context of visual and stylistic issues Conceptual Structural Design Olga Popovic Larsen, Andy Tyas, 2003 This book aims to bridge the gap between engineers and architects understanding of structural form Its intention is to inspire the development of innovative and viable structures It presents case studies where imaginative structural forms are in harmony with the architectural concept and at the same time present very efficient solutions to technical and structural problems *Anthony Hunt* Angus Macdonald, 2000 This volume reviews the work of Anthony Hunt and explores the relationship between engineering and architecture in some of the most important buildings of the late 20th century Architectural Publications Index, 2003 **People of Today**, 2006 Whitaker's Books in Print, 1998 **Constructing Professional Discourse** Concepción Orna-Montesinos, 2012 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discursive and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced *American Book Publishing Record*, 1998 **Encyclopedia of Architectural Technology** Jacqueline Glass, 2002-04-03 Constant technological advancements are opening up dramatic new possibilities for the built form at the same time architects are developing innovative designs which require new techniques to make these ideas reality The Encyclopedia of Architectural Technology is the first book to specifically address these two issues by providing a comprehensive reference to modern

architectural technologies encompassing all key aspects of construction structures environmental design and servicing The Encyclopaedia features over 180 entries ranging from materials and techniques to notable innovators in architecture and engineering Each entry includes a brief quick reference summary followed by a more detailed text and suggestions for further reading Besides technological terms entries are included on related topics such as sick building syndrome and sustainability Key engineers Ove Arup and Ted Happold have dedicated entries as do a range of ground breaking architects such as Le Corbusier Norman Foster Walter Gropius Herzog de Meuron Oscar Niemeyer Richard Rogers Carlo Scarpa Frank Lloyd Wright Ken Yeang and many others Dictionary of International Biography ,2007 A biographical record of contemporary achievement together with a key to the location of the original biographical notes *Against the Grain* ,2001 The Architects' Journal ,1999 *Looking Back in Envy* Jan Kaplicky,2001 In architecture looking back is a prerequisite to looking forward In this book Kaplicky takes the reader through his favourite buildings of the last ten years with contributions from well known names such as Ron Arad and Tony Hunt **The British National Bibliography** Arthur James Wells,2005
