

The Vascular System

What is the vascular system?

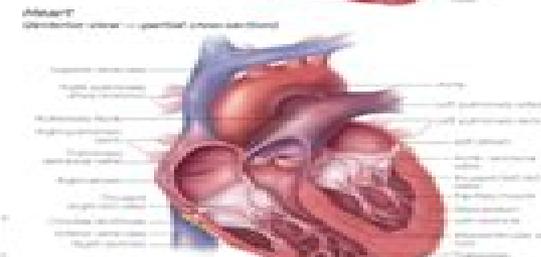

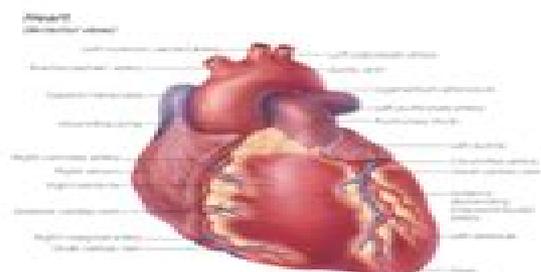

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

Molecular system circulations

Capillary	Capillary

The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right and left atria and ventricles. The heart is located in the chest cavity, between the lungs.

Typical artery (cross-section)

Blood vessels

Blood vessels are the network of tubes that carry blood throughout the body. They are divided into arteries, veins, and capillaries. Arteries carry blood away from the heart, while veins carry blood back to the heart. Capillaries are the smallest blood vessels and are where the exchange of oxygen and nutrients occurs.

Importance of pressure

Blood pressure is the force exerted by the blood against the walls of the blood vessels. It is essential for the flow of blood through the vascular system. High blood pressure can damage the blood vessels and lead to heart disease, while low blood pressure can result in inadequate blood flow to the body's tissues.

Arterial valve work

Arterial valves are located in the arteries and help to prevent the backflow of blood. They are located at the junctions of the arteries and are closed when the blood flow is reversed. This ensures that the blood flows in one direction towards the capillaries.

Libbie Henrietta Hyman

Vascular System:

Hyman's Comparative Vertebrate Anatomy Libbie Henrietta Hyman,1992-09-15 The purpose of this book now in its third edition is to introduce the morphology of vertebrates in a context that emphasizes a comparison of structure and of the function of structural units The comparative method involves the analysis of the history of structure in both developmental and evolutionary frameworks The nature of adaptation is the key to this analysis Adaptation of a species to its environment as revealed by its structure function and reproductive success is the product of mutation and natural selection the process of evolution The evolution of structure and function then is the theme of this book which presents system by system the evolution of structure and function of vertebrates Each chapter presents the major evolutionary trends of an organ system with instructions for laboratory exploration of these trends included so the student can integrate concept with example
