Stem Cell Research and Cloning Mary Byrne, Gareth Jones, 2025-12-31 In August 2004 the government in Britain approved the granting of licences to research groups who wished to research and develop the cloning of human embryos for therapeutic purposes The main focus of such research is the attainment of embryonic stem cells and the development of therapies from such cells Already some of this research is reported to be happening in South Korea While they were initially discussed as separate issues in ethical and theological debates they are now closely intertwined The first group in England to receive a licence predicts that they will be successful within the next few years This adds an intensity to our need to understand the dimensions of this science and its impact on our life as well as our desire to put a meaning to these developments

Cloning and Stem Cell Research Justin Healey, 2007 Cloning is the production of a cell or organism with the same nuclear genome as another cell or organism Reproductive cloning is the production of a human fetus from a single cell by nuclear replacement while therapeutic cloning produces human stem cells tissues and organs without resulting in the production of genetically identical fetuses or babies There appears to be a global consensus against using cloning techniques for reproductive purposes in spite of inconsistency in the regulation of these techniques between countries Australian scientists will now be able to create cloned human embryos after federal Parliament recently voted to overturn a 2002 ban on the research in a rare conscience vote The decision gives hope to thousands of Australians living with

Crafting a Cloning Policy Andrea L. Bonnicksen, 2002-07-15 Ever since Dolly the Scottish lamb tottered on wobbly legs into our consciousness followed swiftly by other animals first mice then pigs that may provide human transplants and even an ordinary house cat thoughts have flown to the cloning of human beings Legislators rushed to propose a ban on a technique that remains highly hypothetical although some independent researchers have announced their determination to pursue the possibilities Political scientist and well known expert on reproductive issues Andrea L. Bonnicksen examines the political reaction to this new born science and the efforts to construct cloning policy She also looks at issues that relate to stem cell research its even newer sibling and poses a key question How does the response to Dolly guide us as we manage innovative reproductive technologies in the future Various legislative endeavors and the efforts by the Food and Drug Administration FDA to oversee cloning as well as policy models related to federal funding individual state laws and programs abroad inform Bonnicksen's identification of four types of cloning policy She analyzes in depth the roles of diverse interest groups as each struggle to become the dominant voice in the decision making process With skill and insight she clears the mists from a complicated topic and addresses the legal political and ethical arguments that are not likely to disappear from the national conversation or debates any time soon

Whose View of Life? Jane Maienschein, 2003-12-22 Saving lives versus taking lives the public regards human embryo research in these stark terms as a battleground of extremes a war between science and ethics Precisely that simplistic dichotomy propagated by vociferous opponents of abortion and proponents of medical research is what Jane Maienschein seeks to counter with this book *Whose View of Life* brings the current debates into sharper focus by examining developments in stem cell research cloning and embryology in historical and philosophical context and by exploring the legal social and ethical issues at the heart of what has become a political controversy Maienschein's multidisciplinary perspective will provide a starting point for further attempts to answer this dilemma

God and the Embryo Brent Waters, Ronald Cole-Turner, 2003-07-22 Discussions and debates over the medical use of stem cells and cloning have always had a religious component But there are many different religious voices This anthology on how religious perspectives can inform the difficult issues of stem cell research and human cloning is essential to the discussion Contributors reflect the spectrum of Christian responses from liberal Protestant to evangelical to Roman Catholic The noted moral philosopher Laurie Zoloth offers a Jewish approach to cloning and Sondra Wheeler contributes her perspective on both Jewish and Christian understandings of embryonic stem cell research In

addition to the discussions found here God and the Embryo includes a series of official statements on stem cell research and cloning from religious bodies including the Roman Catholic Church the Orthodox Church in America the United Methodist Church the Southern Baptist Convention the United Church of Christ the Presbyterian Church USA and the Union of Orthodox Jewish Congregations of America and the Rabbinical Council of America Human Cloning and Human Dignity An Ethical Inquiry from the statement of the President's Council on Bioethics concludes the book The debates and the discussions will continue but for anyone interested in the nuances of religious perspectives that make their important contributions to these ethically challenging and important dialectics God and the Embryo is an invaluable resource
