Technology and Employment Richard Michael Cyert, David C. Mowery, Committee on Science, Engineering, and Public Policy (U.S.). Panel on Technology and Employment, 1987 This report addresses a number of issues that have surfaced in the debates over the impact of technological change on employment These issues include the effects of technological change on levels of employment and unemployment within the economy on the displacement of workers in specific industries or sectors of the economy on skill requirements on the welfare of women minorities and labor force entrants in a technologically transformed economy and on the organization of the firm and the workplace It concludes that technological change will contribute significantly to growth in employment opportunities and wages although workers in specific occupations and industries may have to move among jobs and careers Recommends initiatives and options to assist workers in making such transitions ISBN 0 309 03744 1 pbk

Stanback (Jr.), 1986-10-27 First in a series by the Conservation of Human Resources of Columbia University this volume explores the impact of the computer communications revolution on the employment of workers especially women and minorities The authors identify general trends in the workforce since 1960 and discuss the effects of computers on the kinds of jobs filled by women and the diminishing opportunities for employment available to those with limited formal education Based on extensive field research of companies they argue that the computer communications revolution is leading to widespread upskilling of work and that this is a major threat to those who are least prepared least educated and least trained The authors stress the need to strengthen the relationship between the educational system and the labor market and to bolster programs that integrate labor and disadvantaged workers ISBN 0 8133 0399 0 27 50 High Technology and Job Loss Russell W.
