Population III

Exist 0.1–0.3 GYR
after Big Bang

The first stars in the universe, made almost entirely of pure hydrogen and helium with no metals (0%). They were massive, short-lived, and never been observed directly.

30–500 M_{\odot} (Mass)
2–5 Myr (Lifespan)

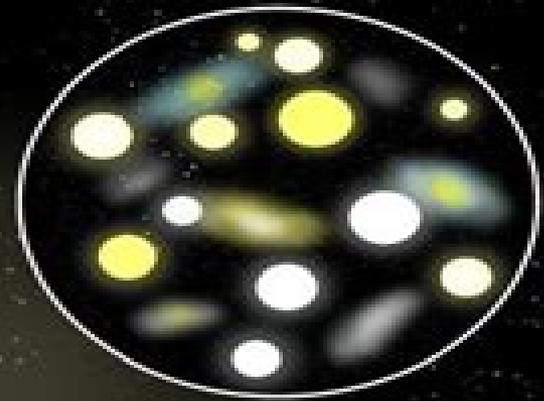

Population II

Exist 0.3–3 Gyr
after Big Bang

Old stars with very low metal content (<0.1%), formed after Population III. Commonly found in globular clusters and galactic halos, indicating great age.

0.1–0.8 M_{\odot} (Mass)
10–13 Gyr (Lifespan)

Population I

Exist > 3 Gyr after
Big Bang

Modern day young stars with high metallicity (1–3%), including the Sun. Found in the galactic disk and often hosting planetary systems.

Stellar Populations:

Evolution of Stars and Stellar Populations Maurizio Salaris, Santi Cassisi, 2005-12-13 Evolution of Stars and Stellar Populations is a comprehensive presentation of the theory of stellar evolution and its application to the study of stellar populations in galaxies Taking a unique approach to the subject this self contained text introduces first the theory of stellar evolution in a clear and accessible manner with particular emphasis placed on explaining the evolution with time of observable stellar properties such as luminosities and surface chemical abundances This is followed by a detailed presentation and discussion of a broad range of related techniques that are widely applied by researchers in the field to investigate the formation and evolution of galaxies This book will be invaluable for undergraduates and graduate students in astronomy and astrophysics and will also be of interest to researchers working in the field of Galactic extragalactic astronomy and cosmology comprehensive presentation of stellar evolution theory introduces the concept of stellar population and describes stellar population synthesis methods to study ages and star formation histories of star clusters and galaxies presents stellar evolution as a tool for investigating the evolution of galaxies and of the universe in general *Stellar*

Populations Colin A. Norman, Alvio Renzini, Monica Tosi, 1986 A comprehensive survey of stellar populations traces them from initial mass function and star formation histories through the chemical history of galaxies and their observed evolution

Stellar Populations Alvio Renzini, Laura Greggio, 2012-09-19 This up to date reference on stellar populations and development models includes coverage of distant galaxies chemical evolution and supernovae Written by highly acclaimed authorities in the field the book makes use of specific problems to reveal the kitchen secrets *Not-So-Simple Stellar Populations in Star Clusters* Chengyuan Li, 2017-09-19 This book focuses on understanding the stellar populations of massive star clusters and aims to investigate the origin evolution and properties of binary systems their collision products as well as the general characteristics e g ages metal content of stellar population s in star clusters It introduces the basic background knowledge of various stellar populations in star clusters as well as their formation interaction and evolution and offers high impact observational results on our understanding of the formation and evolution mode of star clusters Based on these discoveries this book proposes a series of future projects that can shed light on these topics The research introduced in this book reveals key features of star clusters formation and by extension how all stars formed in our universe *Old Stellar*

Populations Santi Cassisi, Maurizio Salaris, 2013-08-29 The book discusses the theoretical path to decoding the information gathered from observations of old stellar systems It focuses on old stellar systems because these are the fossil record of galaxy formation and provide invaluable information on the evolution of cosmic structures and the universe as a whole The aim is to present results obtained in the past few years for theoretical developments in low mass star research and in advances in our knowledge of the evolution of old stellar systems A particularly representative case is the recent discovery of multiple stellar populations in galactic globular clusters that represents one of the hottest topics in stellar and galactic

astrophysics and is discussed in detail Santi Cassisi has authored about 270 scientific papers 150 of them in peer reviewed journals and the title Evolution of Stars and Stellar Populations Stellar Populations D. J. K. O'Connell,1958

Symposium,2010-04-29 IAU Symposium 262 presents reviews on the current understanding of the theories of stellar evolution galaxy formation and galaxy evolution It emphasises what we have learned in the past few years from massive surveys covering large portions of

the sky e.g. SDSS, HDF, UDF, GOODS, COSMOS. Several critical aspects of research on stellar populations deserve further effort in order to be brought in tune with other areas of astrophysical research. The next ten years will see the opening of major observatories that will increase the quality and quantity of astronomical data by orders of magnitude. The expected benefits from these instruments for the study of stellar populations are explored. This critical review of state of the art observational and theoretical work will appeal to all those working on stellar populations from distant galaxies to local resolved galaxies and galactic star clusters.

Stellar Populations Piet C. van der Kruit, Gerry Gilmore, 2013-12-01. The concept of Stellar Populations has played a fundamental role in astronomy in the last few decades. It was introduced by Walter Baade after he was able to resolve the Andromeda Nebula and its companions into stars when he used red sensitive plates and realised that there were two fundamentally different Hertzsprung Russell diagrams in our and these nearby galaxies: common stars in the solar neighborhood versus globular clusters. This result was published in two papers in 1944 in volume 100 of the *Astrophysical Journal*. Subsequent research gave the concept a much firmer basis and at the famous Vatican Symposium of 1957 resulted in a general scheme of the concept and a working hypothesis for ideas on the formation and evolution of the Galaxy. This has been a guiding principle of studies of our and other galaxies for decades. Some years ago it seemed to us appropriate to commemorate Baade's seminal work in 1994 when it would have its 50th anniversary and to review its present status and also its role in contemporary understanding. While we were in Leiden for an administrative committee we discussed the matter again and over beers on October 29, 1991 we decided to take the initiative for an IAU Symposium on the subject during the 1994 IAU General Assembly in Den Haag, the Netherlands.

These proceedings of an international conference held August 2006 in Vienna, Austria demonstrate the relevance of Asymptotic Giant Branch stars and stellar astrophysics as a whole for our understanding of galactic structure and evolution. The meeting brought together astronomers from the fields of AGB stars, galactic evolution and stellar populations. What do we know about the various aspects of AGB stars such as nucleosynthesis and mass loss that will play a role in our understanding of galaxies? At the same time, what do galactic models need from the AGB star community and how are AGB stars included in these models? What will

be the role of AGB star research within the major aims of astrophysics in the coming decades These were the main questions we wanted to discuss at this conference Recent developments in instrumentation such as the Spitzer satellite and current and forthcoming ground based equipment are enabling detailed studies of individual stars and the exploration of ever more distant stellar systems AGB stars are among the first targets that can now be resolved in galaxies outside the Local Group But of equal relevance are the exciting developments that have been achieved in modeling stellar nucleosynthesis mass loss and the evolution of galaxies The book is suitable for researchers and graduate students interested in stellar and extragalactic astrophysics and in physical processes related to nucleosynthesis radiation hydrodynamics pulsation mass loss and the chemical evolution of stellar systems supplied by publisher **Astronomy** William K.
