

PSYC 421: Psychological Testing

Exam 1 Study Guide

Psychological Testing AKA

- The field of study concerned with the theory and technique of educational and psychological measurement of knowledge, abilities, attitudes, and personality traits
 - It involves two major research tasks:
 - The construction of instruments and procedures for measurement.
 - The development and refinement of theoretical approaches to measurement

Measurement

- In psychology, we are interested in describing the distributions of and/or relationships among abstract concepts such as:
 - Political conservatism
 - Intelligence
 - Neuroticism
 - Aggression
- However, in most cases these constructs are abstractions that often cannot be directly observed
- Note that the degree to which the operationalization of the abstract concept reflects or mirrors the construct is the degree to which the operationalization can be said to be **valid**
- The value of scientific research is completely dependent upon the degree to which the operationalizations are successful or valid

Concepts and Constructs

- **Concept:**
 - An abstraction formed by generalization from particulars.
 - Abstracts are hard to define
 - e.g. intelligence
- **Construct:**
 - A concept with scientific purpose (i.e. operationalized)
 - Can be measured and studied.
 - e.g. IQ
