Techniques of Extension of Analytic Objects Yum-Tong Siu, 1974 Several Complex Variables VII H. Grauert, Thomas Peternell, R. Remmert, 2013-03-09 Of making many books there is no end and much study is a weariness of the flesh Eccl 12 12 1 In the beginning Riemann created the surfaces The periods of integrals of abelian differentials on a compact surface of genus g immediately attach a g dimensional complex torus to X If $g \geq 2$ the moduli space of X depends on $3g - 3$ complex parameters Thus problems in one complex variable lead from the very beginning to studies in several complex variables Complex tori and moduli spaces are complex manifolds i.e Hausdorff spaces with local complex coordinates $Z^1 \times \mathbb{C}^n$ holomorphic functions are locally those functions which are holomorphic in these coordinates th In the second half of the 19 century classical algebraic geometry was born in Italy The objects are sets of common zeros of polynomials Such sets are of finite dimension but may have singularities forming a closed subset of lower dimension outside of the singular locus these zero sets are complex manifolds **Notices of the American Mathematical Society** American Mathematical Society, 1974 Contains articles of significant interest to mathematicians including reports on current mathematical research *Selected Works of Phillip A. Griffiths with Commentary* Phillip Griffiths, Maurizio Cornalba, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths papers are used as a standard source on a subject Another important feature of Griffiths writings is that they often bring together classical and modern mathematics The four parts of Selected Works Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths Selected Works provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century *Places and Valuations in Noncommutative Ring Theory* Jan Van Geel, 1981 *Binary Time Series* Benjamin Kedem, 1980 Basic concepts of stationary processes Sufficient statistics for binary Markov chains The distribution of the number of axis crossing Upcrossings of a high level by a stationary process Clipping a gaussian process Estimation in $AR(1)$ after hard limiting Estimation in $AR(p)$ Runs and estimates of correlations Spectral analysis after clipping Extremes in stationary time series A central limit ACL Prediction in binary data **Mathematical Programming with Data Perturbations I** Anthony V.
