## Telescope Making:

**Amateur Telescope Making** Stephen Tonkin,2012-12-06 Many amateur astronomers make their own instruments either because of financial considerations or because they are just interested Amateur Telescope Making offers a variety of designs for telescopes mounts and drives which are suitable for the home constructor The designs range from simple to advanced but all are within the range of a moderately well equipped home workshop The book not only tells the reader what he can construct but also what it is sensible to construct given what time is available commercially Thus each chapter begins with reasons for undertaking the project then looks at theoretical consideration before finishing with practical instructions and advice An indication is given as to the skills required for the various projects Appendices list reputable sources of mail order materials and components The telescopes and mounts range from shoestring very cheap instruments to specialist devices that are unavailable commercially [Making Your Own Telescope](#) Allyn J. Thompson,2003-01-01 Complete detailed instructions and numerous diagrams for constructing a do it yourself telescope No complicated mathematics are involved and no prior knowledge of optics or astronomy is needed to follow the text s step by step directions Contents cover among other topics materials and equipment tube parts and alignment eyepieces and related problems setting circles and optical principles 1973 ed Appendixes Index 6 plates 100 figures [Amateur Telescope Making in the Internet Age](#) Robert L. Clark,2010-10-14 Building an astronomical telescope offers the amateur astronomer an exciting challenge with the possibility of ending up with a far bigger and better telescope than could have been afforded otherwise In the past the starting point has always been the grinding and polishing of at least the primary mirror a difficult and immensely time consuming process But now that the Internet has brought us together in a global village purchasing off the shelf goods such as parabolic mirrors eyepieces lenses and telescope tubes is possible There are also a vast number of used mirrors and lenses out there and it is now possible to track them down almost anywhere in the world Online stores and auction houses have facilitated commerce regarding all sorts of useful optical components at a reasonable price This is a book about making telescopes from available parts It provides guidance on where to look and what to look for in selecting items useful for telescope making and explains how to assemble these components to produce an excellent instrument on a tight budget At one time many amateurs made their own telescopes from home made parts In today s rushed world that has almost become a lost art The Internet offers a wonderful alternative to either buying a pricey scope fully assembled or making your own from scratch **Telescope Making** ,1981 *Standard Handbook for Telescope Making* Neale E. Howard,1984 Describes different types of telescopes explains how to set up a workshop and build an observatory and discusses recent developments in celestial photography **Advanced Telescope Making Techniques: Optics** Allan Mackintosh,G. Kenneth Hawkings,Ferdinand I. Baar,1986 *Building and Using Binoscopes* Norman Butler,2014-10-25 Provides easy to understand information and guidelines about the design and construction of binoscopes Focusing on both homemade and commercial products this book provides the

reader with simple and straightforward information about the modelling and building of binoscopes Binoscopes can be thought of as binoculars enlarged to the size of telescopes essentially a combination of the two Constructing a binoscope is easier than most people think but it still demands attention to detail and proper background knowledge The author goes on to provide additional information about how to understand the products currently on the market should the reader choose to purchase a binoscope instead of building one Lastly the book also compares binoscopes with telescopes in great detail outlining the differences the reader can expect to see in the night sky from using both The celestial views obtained with a binoscope compared to a single telescope of the same aperture are a very different experience and well worth the effort
